

Suppliers Catalogue

Introduction

This catalogue gives an overview of the main industrial capabilities and the most recent product and process innovations from those companies in the supply chain of the Galician Automotive Industry.

Within the framework of the Third Strategic Plan for competitive improvement of the Galician Automotive Sector – P3CA 2025, the importance of promoting the component manufacturers and service companies in Galicia. This document – which will be constantly updated – reflects the existence of a network of companies in Galicia that already supply parts to many major vehicle manufacturers around the world.

The Galician Automotive Industry is one of the cornerstones of the Galician economy and has a highly internationalized component industry which exports more than 1,600 million euros each year to external markets. Moreover, more than 100 of the CEAGA companies already export its products or provide its services abroad.

With the support of the Xunta de Galicia (Galician Regional Government), the Galician Automotive Industry Business Cluster (CEAGA) was founded in 1997 by 37 automotive component manufacturers with the intention of developing joint development projects, aimed at increasing competitiveness.

In November 1996 the CEAGA Foundation was launched with the primary aim of “placing the Galician Automotive Sector in a position of competitive and sustainable leadership in Europe within Horizon 2025, contributing to progress and improved quality of life of Galicia”.

Currently, CEAGA covers the entirety of Galician companies in the automotive sector: more than 140 supply companies, the Stellantis Center of Vigo and the Galician Automotive Technological Centre (CTAG).

Our cooperative model has been recognised for its excellence on various occasions. At a national level, it has been classified as “Excellent” by the Ministry for Industry, Energy and Tourism. Internationally, CEAGA has gained the “Gold Label” accreditation awarded by The European Secretariat for Cluster Analysis (ESCA) as one of the best-managed cluster organisations in the European Union. Furthermore, CEAGA was awarded the most prestigious international award in the field of excellence and training – the EFMD Excellence in Practice Awards 2013 – for the New Products Management and Development Programme.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 ² Up to 20 employees

Company description

Since 1999 this company has been developing RFID software and hardware, starting its operations in Mexico. In 2023 they started a new company in Spain. They are focused on:

- Fixed asset control with RFID
- Tracking and control of returnable packaging with RFID for the automotive industry

Products and services

With the RPMS (Returnable Packaging Control System), this company makes the production chain efficient to control and count in seconds the pieces supplied in returnable packaging, since each box has an RFID tag relating the pieces it contains. This system is used for loading and unloading in assembly plants and Tier I, II and III suppliers. With this, the system can identify that the suppliers supply the complete material to the plant, avoiding manual counting. With this same solution, applying AI, it can identify that suppliers have returnable packaging supply up to 6 months in advance to avoid problems in the production area. In conclusion, RPMS controls the entire logistics process of the movement of parts in and out of the plant. The Accsys Track Fixed Assets Control System allows to identify all the company's assets from tools, laptops, furniture, etc.

Processes and technologies

Forklift RPMS implements tools to detect if they are circulating through areas that do not belong to them, or if they take or leave packages that do not correspond to what was requested. With this, operators no longer have to be looking at a sheet or a screen, since the system itself informs them if they are performing their activities well and if their productivity is within the required standard. One of the main advantages of this technology is that warehouses or warehouses become dynamic, since now the system indicates the best location according to the type of product they have and do not depend on a location fixed on a map or a standard.

4Flow Spain, S.L.U

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 ² Between 21 and 100 employees

Company description

This company is a specialist in optimization of logistics networks and global supply chains. Its services cover the entire spectrum of needs for the improvement and management of the supply chain: development and implementation of technologies, consulting for the supply chain and the outsourcing of the key areas management. As a neutral supplier (4PL), it finds the best solution for each client in any situation, at an optimal cost. Customers get the greatest possible transparency in their networks and more flexibility in their supply chains.

Products and services

Auxiliary services

Logistics and transport

Process outsourcing

- Development of technological solutions for the management and optimization of the supply chain.
- Consulting to improve the supply chain (transport, warehouses, intralogistics, etc.)
- Outsourcing of supply chain management and optimization (4PL).

Processes and technologies

Other technologies

Main customers

In Spain, mainly works for the automotive sector. At a global level, the company is working or has worked for important clients in the retail, distribution, agri-food, pharmaceutical and chemical sectors.

AC Systems Atlantic, S.L.U.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 .² Between 21 and 100 employees

Company description

This company, created in 2009, offers industrial subcontracting services in the manufacturing processes by machining, stamping, assembly and cutting. It has a dynamic and flexible production center of the serial elements, which allows its customers to optimize their production processes.

Products and services

Auxiliary services

Process outsourcing

Ac Systems Atlantic is a supplier company of automotive companies and manufacturers of capital goods.

Processes and technologies

Assembly

Joining processes

Metal shaping

Development of tools and process improvement. It also carries out cutting and machining processes.

Main customers

Matrigalsa, Matrivigo, Europrecis, Industrias Abalde, Izmar, etc.

Adhex Tech Tapes, S.L.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1

¹ Between 6,000,000 and € 17,999,999. ² Between 21 and 100 employees

Company description

Adhex Tech Tapes is a 100% subsidiary of Adhex Technologies created in July 2001. It carries out activities related to the manufacture of adhesive and protection solutions (sealing, acoustic, thermal and surface) for the automotive sector (OEMs and Tier1). At present, it has the IATF16949 quality certificate of quality management for the automotive sector, as well as the ISO 14001, ISO 45001 and CCAP (China Marked) certifications. In addition, the Porriño production plant is recognized as a Q1 supplier for Ford and A level for the VW Group. The new facilities since 2020 have an area of 13,000 m2 and they house sustainable and environmentally friendly activities.

Products and services

Module or function

- Boot
- Central console
- Cockpit
- Door module
- Electrical wiring
- Engine compartment
- Exterior elements
- Floor coating
- Front End
- Ground contact system
- Rear end
- Roof
- Seats

Processes and technologies

- Other technologies
- Plastic shaping
- Textile shaping

Adhesive lamination; Serigraphy; Ceiling stiffeners; Thermoforming and application of adhesive by robot (hotmelt, butyl); Automatic online screen printing; Die cutting; Adhesive transfer with a corona treatment station (which improves adhesion); Adhesive cutting machines; Automated line for the manufacture of roof stiffeners; Ultrasonic sealing line for sound-absorbing materials.

Main customers

Stellantis, Ford, Renault, VW, Audi, Seat, Mercedes-Benz, Nissan, etc.

Advanced Comfort Systems Ibérica, S.L.U.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1

¹ From € 18,000,000 ² Between 21 and 100 employees

Company description

ACS Ibérica is part of CIE Automotive, an industrial group with global footprint, specialised in high added value processes in areas such as forging, aluminium injection, casting, machining, stamping, plastics and roof systems. It is this last area where the main activity of ACS Ibérica is framed, offering other products related with the vehicle interior comfort too.

Products and services

Module or function

Door module

Roof

Roofs; Sun visors; Side Window Sun Shades; Windstoppers; Luggage covers; Door reinforcements; Interior galleries

Processes and technologies

Assembly

Joining processes

Glass encapsulation; robotic gluing; Aluminium machining; MIG-MAG and ultrasonic welding; Assembling; Acoustic control.

Main customers

Stellantis, Renault, Volkswagen, SMRC Automotive Interiors Spain, etc.

Akwel Vigo Spain, S.L.U.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1

¹ From € 18,000,000 ² More than 250 employees

Company description

The company was set up in Vigo in 1962, supplying at that moment, plastic and metal parts to the automotive sector and other industries, although nowadays is just focused on plastic transformation. At its development centre in Vigo they develop, for the whole Group, new projects and products in the area of opening mechanisms. They make substantial investments in technological innovation, equipment as well as improvement of the Vigo plant industrial machinery. The quality policy is part of the company's culture. They continually strive for excellence, as a result of the dynamism and involvement of their workforce. Committed to innovation, quality and service, the company ensures an effective response to its customers needs around the world.

Products and services

Module or function

Boot
Door module
Engine compartment
Engine electronics
Exhaust and manifold
Exterior elements

The development centre of the Akwel Group is located in Vigo and is involved with the manufacture of:

- Mechanisms: bonnet lock, boot lock, double rear door closing mechanism, sliding door lock and sun roof closing system.
- Door handles: door handles for the exterior and interior of side doors, sliding side doors, boot lids, tailgate doors, double rear doors and window opening handles.
- Urea tanks to reduce emissions (SCR)
- Engine plastic components and battery box

Processes and technologies

Assembly
Joining processes
Other technologies
Plastic shaping

- Plastic injection (mainly polyamides and ABS)
- Plastic blowing
- Parts assembling
- Ultrasonic welding
- Hot plate welding
- Thermal insertion tools
- Water tightness control
- Robotics and automation integration

Main customers

Renault, Stellantis, Ford, General Motors, Toyota, Opel, Seat, Dacia, Nissan.

Aludec, S.A.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1

¹ From € 18,000,000 -² Between 101 and 250 employees

Company description

Aludec was founded in 1984 and is dedicated to the manufacture of decorative parts for the automotive industry. It is based on an interchange of various technologies to offer a diverse and wide range of original and innovative products that can be prepared in various finishes. Aludec has a R&D centre that is directly in contact with the design departments of constructors to capture market trends and develop appropriate solutions. Located in Galicia, Aludec works with all the constructors and delivers parts around the world; among other things, they are one of the world's leading manufacturers of badges and monograms.

Contact

Products and services

Module or function

Boot

– Badges and Monograms: injected and chrome plated and / or screen printed stamped sheet aluminium. Aludec has patented a system for injection moulding the new Ford bi-tone badge.

Cockpit

– Sill plates: in stainless steel or aluminium, embossed, printed or brushed.

Door module

Driving position

– Bumper scuff plates: injection moulded and chrome plated or decorated with thermoform film and printed with personalised decoration developed by Aludec's design department (IMD).

Exterior elements

Front End

Striping (adhesive decorative films).

Ground contact system

Processes and technologies

Assembly

Metal shaping

Plastic shaping

Surface treatments and finishes

Aludec has various in-house technologies: stamping and embossing aluminium or stainless steel; screen-printing in whiteroom of various films (PVC, ABS, PC and aluminium); painting; cutting and machining of various materials; injection moulding. The company has machinery ranging from 80t to 650t and IMD specific machinery (in-mould decoration); HP thermoforming; tampography; chrome plating of plastic pieces (micro-porous, micro-brushed, Chrome III).

Main customers

Ford, GM, VW Group, Stellantis, BMW, Mercedes, Porsche, Rolls-Royce, Fiat, RNA/Nissan, Toyota, Faurecia, Delphi.

Aníbal Metalmecánica Gallega, S.L.

Turnover¹

Employees²

Sales information

Main value chain Tier 2
Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 ² Between 21 and 100 employees

Company description

Aníbal Metalmecánica Gallega (AMG) is a young, dynamic company with highly skilled personnel. They specialise in the cutting, machining and shaping of steel and aluminium piping for the automotive industry. The company has incorporated the logistics experience of the Aníbal Blanco Group, allowing them to perform collection services and JIT deliveries, purchase of raw materials and packaging, and warehousing and storage of materials on consignment.

Products and services

Module or function

- Brakes and steering
- Engine
- Engine compartment
- Exhaust and manifold
- Filler pipe
- Raw materials
- Seats

Shaped metal tubes which our clients currently incorporate in EGR modulators and other components including heat exchangers, CV joint cages, steering rods, etc. The company can also supply tubing for seat modules and exhausts.

Auxiliary services

- Process outsourcing

Processes and technologies

- Assembly
- Metal shaping

Cutting, de-burring, machining and shaping of tubes. Most used materials: Various carbon steel alloys ((st 37, St52, SAE 8617, etc.), stainless steel (Aisi 304, 316, etc.) and aluminium (3003, 6063, etc.).

Cutting and de-burring tubes: Adige TS72, Pedrazzoli SCL 102 and HDC 650 (4 heads).

Cutting and machining tubes: 3 Adige CM502 machines; 2 of which can machine tube ends in 3-axes (threading, etc.).

Shaping of tubing for manufacture of framework.

Main customers

Borgwarner Emission Systems, GKN Driveline, Inoxidables de Rábade, Sapa Extrusión, Schoeller, Ati, Borgwarner Dixon (USA), etc.

Antobal, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 - ² Between 21 and 100 employees

Company description

Antobal S.L. is a company with experience and training in the development and manufacture of machining tools and dies for stamping, cutting and machining sheet metal for various industries as well as manufacturing parts for metalworking. Their premises cover an area of 550 m2 of which 500 m2 are covered.

Products and services

Auxiliary services

Die-stamping and tools

Antobal specializes in the development, design and manufacture of tools for machining parts and dies for stamping, and cutting sheet metal.

Processes and technologies

Metal shaping

Other technologies

The company specializes in the design and manufacture of tools for shaping parts, dies, electrical welding, machined and shaping nautical parts and accessories.

Main customers

Lear Corporation, Dalphimetal, TI Group, Aluporta, Valiant, Dayco Ensa, Supra Ind. Textil, Plymouth, Rubber Europa, Viza Automoción, Benteler Automotive Vigo, Marsan and Maier.

Asea Brown Boveri, S.A. (ABB)

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ From € 18,000,000 ² Between 101 and 250 employees

Company description

ABB is a leading supplier of industrial robots, modular manufacturing systems and services. A strong solutions focus helps manufacturers to improve their productivity, product quality and worker safety. ABB has installed more than 300,000 robots worldwide.

Products and services

Auxiliary services

- Automation and robotics
- Machinery and small integrated lines
- Maintenance and services

Products: Industrial and collaborative robots; Functional packages (arc/resistance welding, deep drawing, sealing and painting); Modular solutions (arc/resistance welding and painting); "Connect & produce" solutions (arc/resistance welding cells, dimensional inspection, etc.)

Services: Maintenance and spare parts management; After-sale services; Training (specific programmes on robotic process automation); Simulation of process automation and robotics (real cells or 3D); Engineering support to robotic solutions based on robots; Installation and implementation of robotic solutions; Improvement of facilities.

Processes and technologies

- Assembly
- Electrical material
- Joining processes
- Metal shaping
- Other technologies
- Plastic shaping
- Surface treatments and finishes
- Wood processing

Provision of packed robots; Functional packages; "Connect & produce" cells. We can carry out testing, both in 3D simulation and with real cells, for auto parts production processes.

Main customers

Stellantis, Gestamp, Benteler, Lear, Grupo Antolin, Faurecia Group, Borgwarner, Galicia Auto Estampación, Viza Automoción, Plastic Omnium, Aludec, Grupo Copo, Reydel Automoción, Tréves Galicia, Incalplas, Denso, Maier Ferroplast, Industrias Delta Vigo, Emenasa, Snop Estampación, GKN Driveline Vigo.

Augusto Logística, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 ² Up to 20 employees

Company description

Augusto Expres founded the company in 1990 as a national and international haulage company. The company has continued to grow in response to the needs of its clients and is now an international transport and logistics operator. They deal with the collection of raw materials, storage of these and Just in Time deliveries to their clients, whilst also collecting and distributing finished goods to the end user. All these activities are on a Europe-wide scale. The company has the following quality certificates: ISO 9001:2008 and 14001:2004.

Products and services

Auxiliary services

- Diverse
- Logistics and transport

The company has a range of articulated lorries, mega-trailers, trucks and vans. Make national and international deliveries of goods in full or joint cargo trucks. Direct service between factories with goods tracking at all times. They can offer warehousing of goods, repacking, relabeling, stock control, quality control, order preparation.

Autoneum Spain, S.A.U.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1

¹ From € 18,000,000 - ² Between 101 and 250 employees

Company description

Autoneum is a global technology leader in acoustic and thermal vehicle solutions management. With over 45 plants in 26 countries and more than 9,600 employees, the company is a partner with major vehicle manufacturers around the globe. Autoneum supplies innovative, affordable solutions for noise reduction and thermal control utilising low-weight products which in turn increases the comfort and value of the vehicle whilst also reducing CO2 emissions.

Products and services

Module or function

- Boot
- Cockpit
- Engine compartment
- Floor coating
- Ground contact system

- Underbody and engine insulation: providing a protective thermal barrier between heat sources and the bodywork or other heat-sensitive parts with the possibility of installing air conduits, reducing the interior and exterior noise levels.
- Textile Wheel Arches: with the functionality of reducing interior and exterior noise caused by the tyres rolling and splashing as well as protecting the bodywork.
- Inner dashes: used to absorb and insulate against noise, providing a good fit to the vehicle body. Also absorb impact energy in case of collision.
- Insulating flooring: designed with latest touch technology, aesthetic parts which are abrasion, puncture and wear resistant. Easy to clean and hard-wearing. Furthermore, they provide acoustic insulation and absorption and also absorb impact energy in case of collision.

Processes and technologies

- Joining processes
- Plastic shaping
- Textile shaping

Autoneum Spain offers various product lines and utilises the following technology:

- Hot moulding and cutting presses.
- Polyurethane foam injection presses including one-shot method.
- Waterjet cutting system robots.
- Automated hot-cold moulding lines.
- High frequency, vibration and ultrasound welding.
- Fibre injection moulding and cutting lines.
- Woodstock compression moulding presses.

Main customers

Stellantis (Vigo, Mungalde and Villaverde Centers), Renault Palencia, etc.

Benteler Automotive Vigo, S.L.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1

¹ From € 18,000,000 ² More than 250 employees

Company description

Benteler is a multinational company, originally from Germany, currently working all around the world with more than 28,000 employees and 130 locations in 38 countries. Under the strategic holding company "Benteler International AG", the business operations are divided into three legally independent business divisions. The largest division is in the automotive industry, representing more than 75% of Group turnover. It is dedicated to the development and production of innovative safety, environmental and light construction products. Benteler Automotive is a full service provider for almost all automotive manufacturers worldwide and provides customer-oriented solutions for a wide range of products; of particular importance are the chassis and modules, structures and the engines and exhaust systems groups. Benteler Vigo is a factory which mainly produces chassis and structures.

Products and services

Module or function

Front axles, rear axles, suspension arms, hot-stamped parts (low-thickness with high resistance), aluminium parts.

Cockpit

Driving position

Front End

Ground contact system

Rear end

Processes and technologies

Assembly

Joining processes

Metal shaping

Other technologies

Surface treatments and finishes

The main processes utilised at the Benteler Vigo factory are cold-stamping, hot-stamping, MIG-MAG resistance welding, electrophoretic painting, 3D laser cutting, shot peening and assembly. Within the welding, aluminium products are included. In the hot-stamping variable thickness parts are included. Benteler Vigo has the following means of production: 2 Transfer presses (2,000 and 3,600 t); 2 hot-stamping lines; 2 3D laser cutting machines; 6 automated welding lines with 172 robots; 1 electrophoretic painting line; 2 resistance welding machines.

Main customers

Stellantis, General Motors, Volkswagen, Fiat.

Besteiro Ingeniería, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 ² Up to 20 employees

Company description

The Besteiro Ingeniería SL group is dedicated to the certification and safety of machinery. They offer services such as CE Marking, Adaptations to RD 1215, Risk Assessments and Technical Files. In addition to these audits, they also develop other works, such as quality audits (ISO: 9001, 14001, 45001, 5001), welding studies, rack certification, legalization of APQs, installations, machine designs and programming (automatons, robots, cobots, etc.). They offer turnkey projects.

Products and services

Auxiliary services

- Automation and robotics
- Diverse
- Engineering
- Industrial supplies
- Machinery and small integrated lines
- Process outsourcing

Certification of machines: CE marking, R.D 1215/1997, other European directives and standards.
Safety check list for production lines and equipment.
Design of safety components for machines and production lines in automotive companies and other industrial sectors.

Processes and technologies

- Assembly
- Electrical material
- Glass processing
- Metal shaping
- Plastic shaping
- Textile shaping
- Wood processing

Currently, Besteiro Ingeniería SL is in the design and study phase of an app for portable devices. Users of the application will be able to consult and perform calculations on the safety of their machines and production lines. With this, they get a first information, important for the customer and can reduce the time in the correction of certain risks.

Main customers

Cie Galfor, Foresa, Finsa, Treves Galicia, Lactalis, etc.

Bibus Spain, S.L.U.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 6,000,000 and € 17,999,999. ² Between 21 and 100 employees

Company description

Industrial components distribution company, active in the following areas: hydraulics, pneumatics, mechatronics and environment. As well as distribution, the company works on the design, construction, commissioning and maintenance of equipment related to their activity. They also specialize in the design and construction of refrigeration panels for welding guns. They supplied the Stellantis Vigo plant for the launch of the B78, among other things.

Products and services

Auxiliary services

- Engineering
- Machinery and small integrated lines
- Maintenance and services

Technical description of the service design, construction, set up and maintenance of:

- Hydraulics, oleo-hydraulics and pneumatics, tailor-made according to the needs of the client.
- Low consumption "ECO" hydraulics groups.

Processes and technologies

Other technologies

Since the company started working in Spain in February 2009, Bibus Spain has worked in the development of machinery and subsystems for OEMs with integrated hydraulics, pneumatics, mechatronics and environment technologies. Among the machinery manufactured by Bibus, the following are highlighted: oleo-hydraulic machinery and controllers, lubrication and oil recirculation machinery, pumping machinery for a variety of fluids, fluid dosing systems, pneumatic control and power machinery, vacuum machinery, refrigeration panels for welding guns, etc.

Main customers

Stellantis, GKN, Bühler, Maxam, etc.

Borgwarner Emissions Systems Spain, S.L.

BORGWARNER

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1

¹ From € 18,000,000 -² More than 250 employees

Company description

The company started its activity in 1967 with the development and manufacture of automotive parts. In 2001 it became part of the Italian multinational Dytech, as part of its Fluid Technologies Division. It kept the Dytech Ensa name until 2010 when it became part of the BorgWarner Group.

Products and services

Module or function

Engine

Filler pipe

This company manufactures: EGR modules, EGR coolers and tubing, fuel rails, fuel injectors and carbon steel and stainless steel parts.

Processes and technologies

Assembly

Joining processes

Metal shaping

The company has numerous production plants including, by way of example: ends shaping machinery, CNC bending machines, specialist machinery, stainless steel furnaces, TIG welding robots, leak control equipment, bellows manufacturing facilities (Hydroforming), automatic production lines, MIG welding, etc.

Main customers

Renault-Nissan, Ford, Volkswagen, General Motors (Opel/Saab), Suzuki, Iveco, Daimler Chrysler, Stellantis.

Bosch Rexroth, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 6,000,000 and € 17,999,999. ² Between 21 and 100 employees

Company description

Bosch Rexroth is a global supplier of products for the construction of machinery and installations, offering solutions in all relevant technologies for control, operation and movement (hydraulics, electric controls and drives, linear and assembly technology as well as pneumatics).

Products and services

Auxiliary services

Automation and robotics

Engineering

Machinery and small integrated lines

Maintenance and services

The company works in turnkey industrial automation projects including architecture design, electronics studies, programming, testing and production assistance until its total availability. Technical consulting services for the client during the entire life cycle of the installations, providing repair, maintenance and specific training.

Processes and technologies

Other technologies

Application of the "Lean Manufacturing" concept with their MPS (Manual Production System), providing clients with an integrated design for their entire plant.

Main customers

70% of their production is addressed to the Galician automotive industry.

Carrocerías Dafer, S.A.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 - ² Between 21 and 100 employees

Company description

Carrocerías Dafer S.A. was founded in 1973 and specializes in the manufacture of refrigerated van bodywork and isothermal cladding. It specializes in providing products, services and quality solutions for all companies, brokers and independent traders dedicated to transportation and storage of perishable goods. With over 40 years' experience in the industry, they provide services to the most prestigious companies in Spain and abroad, tailored to the needs of its customers. The company has developed a proprietary technology based on the use of resins and insulating materials for the manufacture of Dafer isothermal panels. These panels provide greater watertightness, insulation, strength and longevity for all products.

Products and services

Auxiliary services

Diverse

Manufacture of certified refrigeration boxes of various dimensions, adapted for all makes and chassis models (Mercedes, Renault, Nissan, Opel, Iveco, Volkswagen, Ford, Citroën, Peugeot and Fiat).

– Manufacture of certified insulated liners for different models of vehicle constructors: Mercedes, Renault, Nissan, Opel, Iveco, Volkswagen, Ford, Citroën, Peugeot and Fiat.

-Installation of refrigeration equipment and lifting platforms in different bodyworks.

-Manufacture of exclusively designed FRP components in accordance with the needs of their clients.

Processes and technologies

Other technologies

- Manufacture of sandwich panels
- Fibreglass reinforced polyester (FRP)
- Insulation
- Moulds
- 15 x 3 m vacuum presses
- 15 x 3 m pantograph for cutting and routing

Main customers

Carriers, distributors and authorised dealers.

Castro Inversión y Desarrollo, S.A.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 3

¹ Less than € 1,500,000 ² Up to 20 employees

Company description

Company dedicated to the assembly of components (CKD) for bus frames, destined for bodywork plants, in all its propulsion variants (diesel, CNG, hybrid, electric), as well as the construction of part of the frame depending on the configuration and specifications of the final client. In addition, the company is oriented towards innovation projects.

Products and services

Module or function

Ground contact system

- Manufacture of the central rack modules.
- Assembly of the central rack modules, as well as elements supplied in CKD by the rack manufacturer, connection and start-up of the First Phase vehicle.

Processes and technologies

Assembly

Joining processes

- A single assembly line with fully modular capacity, adaptable to any variant of bus frame or even commercial vehicle of similar dimensions.
- Movable and adjustable bench, fixing means and moving components and sub-assemblies.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 - ² Between 21 and 100 employees

Company description

CETEC (Copo Group Technology Centre) works in R&D (both processes and products), technological surveillance and the manufacture of moulds, machinery and plant as required by the Group. One of its main tasks is to search for new formulations with new raw materials for the continuous improvement of comfort in vehicle seating. They work closely with their clients' engineering departments. They also contribute to the production and realization of developments in the various products across the four divisions of the Group. They are currently undertaking a development project in which they are producing the foam and EPPs and the covers, as well as the assembly of the complete seat unit.

Products and services

Module or function

Seats

Short production runs of any type of foam filling, including technical foams for acoustic and / or thermal insulation. Latest innovations in seating foams: TECHNOFLEX, notably increases comfort, even in thinner sections; INALCO, a foam which is incorporated into the cover, eliminating the need for bonding between the filler and the fabric, improving comfort and providing an economic improvement.

Auxiliary services

Die-stamping and tools

Engineering

Machinery and small integrated lines

Maintenance and services

Process outsourcing

Technological centres

– Manufacture of moulded foam moulds for the various technologies (cold and hot foam and INALCO), EPP / EPS moulds, machinery for fatigue testing, control and / or poka-yokes.
– Technological assistance in the moulding processes both in development of lines and to find improvement solutions. Example: rigidification study of metal structures using foam injection, allowing the reduction of the thickness of metal used, reducing metal consumption and final weight whilst maintaining rigidity and performance. Furthermore, the company possesses various routing stations. These are used in the production of moulds as well as for making shaped foam prototypes for internal use and external clients.

Processes and technologies

Other technologies

Improvements in the foam filler manufacturing processes for vehicle seats by using innovative chemical formulations. Research and development of new production processes based on the strategic lines of OEMs (weight and cost reduction, improvements in comfort). Mechanized lines for the production of tools and prototype parts. Prototype factory for foam moulding.

Main customers

Copo Group.

CIE Galfor, S.A.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1

¹ From € 18,000,000 ² More than 250 employees

Company description

CIE Galfor is a company belonging to the CIE Automotive multinational Group. This plant is specialized in the manufacture of forged steel parts for the automotive sector. It was first established in 1966 as Barreiros Orense, S.A. and in 1980 it changed its name to Forjas de Galicia. In 1998 it became part of the GSB Group with the name GSB Galfor S.A. In 2002, the merger of the GSB and Corporación Industrial Egaña Groups, resulted in the creation of the CIE Automotive Group.

CIE Galfor has just one production plant located at the San Cibrao das Viñas Industrial Park, in Ourense. They have a total surface of 66,200 m², of which 25,000 m² are built-up. Their mission is to be leaders in their market – the manufacture of forged steel parts – certifying the highest standards of quality.

Products and services

Module or function

- Engine
- Ground contact system
- Transmission

The company is involved in the forging and machining of steel parts for the automotive industry, mainly producing crankshafts, front axles, axle shafts, suspension elements, spindles and hubs. In terms of product innovation, CIE Galfor – with the assistance of the R&D & innovation department – is currently researching the use of alternative materials with improved characteristics.

Processes and technologies

- Metal shaping
- Surface treatments and finishes

CIE Galfor has the following processes: hot steel forging through stamping, electro-upsetting and extrusion, including thermal treatments, finishing and machining.

Additionally, it has the following means of production, conceived as one-piece-flow:

- 5 fully automatic vertical presses lines (4,000 – 6,300t) for the specific manufacture of crankshafts.
- 3 counterblow hammers (200-320 kJ) mainly used for the forging of truck axles.
- 2 hydraulic presses (630 – 650t) for the manufacture of spindles and hubs, one of them automated.
- 4 electro-upsetters in line with friction press, for the manufacture of driveshafts (automatic handling and monitoring).
- It also has a fully equipped lab with all the machinery required for quality control: 3-dimensional machines, 3D scanner, durometers, metallographic microscope, magnaflux and ultrasounds, among others.

With regards to process innovation we can stand out: the continuous development of applications for high speed milling machining programmes; the development of a complex closed volume forging system to minimize scrap; researching on steel and treatments to increase tool life.

Main customers

Audi – VW, Renault, Daimler, GM, Opel, BMW, Jaguar, Ford, Fiat, Hyundai-KIA, DAF, Dana, Iveco

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1

¹ Between 6,000,000 and € 17,999,999. ² Between 21 and 100 employees

Company description

The company started its activity in 1990, manufacturing vehicle thermoformed carpets. Componentes de Vehículos de Galicia, S.A. develops and industrialises interior trim projects such as interior carpets, wheel arches, parcel trays or thermal shields. It is 50% co-owned by the Copo and Faurecia groups. 100% of its production is sent to car manufacturers, mainly to Stellantis, Nissan and Mitsubishi.

Products and services

Module or function

- Boot
- Engine compartment
- Floor coating

- Carpets and textile carpet trims (polyester fibres) with heavy layer thermoformed, PU foam, plastic parts and acoustic absorbers, etc.
- Thermoplastic olefin (TPO) washable mats and mats for trunk floor, with PU foam.
- Textile carpet parcel trays with composite core in fibreglass, plastic fibres and honeycomb cardboard.
- Flat or thermoformed cotton fibre felt soundproofing parts for the interior of the vehicle.
- Thermal and acoustic insulation for the engine compartment with thermoformed textile fibers, aluminium film as well as fire and hydrocarbon resistant non-woven fabrics.
- Textile carpet false floor with encapsulated wood core.
- Plastic air ducts with polypropylene fibre acoustic absorber.

Processes and technologies

- Joining processes
- Plastic shaping
- Textile shaping

Componentes de Vehículos de Galicia has different production lines with the following technologies:

- Carpets thermoforming
- Felts thermoforming
- Fibreglass, plastic fibres and honeycomb cardboard composites thermoforming
- Thermoplastics vacuum thermo-napping
- Carpet, wood, felt and non-woven fabrics encapsulation
- PU foaming
- Robotic water jet cutting
- Punch die cutting
- Ultrasound welding
- Vibration welding
- Thermal welding
- High frequency welding
- Die cutting

Main customers

Stellantis, Nissan, Porsche, Mitsubishi.

Construcciones Mecánicas de Galicia, S.L. (Comegal)

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000. ² Up to 20 employees

Company description

Comegal was created in 1998. Their main assets are the experience and expertise of their staff who, thanks to continuous investments, are able to meet the requirements – primarily in the automobile sector – with regard to the design and construction of small assembly and handling posts, and dies for forming, stamping, embossing and milling components. The design, construction and commissioning of dies, especially fine tooling for visible components, are the specialty of Comegal.

Products and services

Auxiliary services

Die-stamping and tools

Tools, moulds, dies (for visible components and manufacture of trim inserts and badges).

Design, and in commissioning of fine cutting machinery for decorative and visible components; prototypes and models.

Processes and technologies

Metal shaping

Other technologies

Design, grinding and erosion machining, rectification, assembly and commissioning.

Coperma, S.A.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1
Auxiliary value chain

¹ Less than € 1,500,000 - ² Up to 20 employees

Company description

Coperma S.A. started business in 1971 as a woodworking manufacturer. Currently, the company has two principle business divisions: packaging and panels for the automotive industry and furnishings, as well as commercial premises renovations. In 1978 they started to produce packaging for Stellantis. Since then they have produced packaging for hundreds of products for transport, with total security: windscreens, dashboards, doors and motors for Stellantis and their auxiliary supply industry. In 1998 they incorporated the use of CNC machinery and CAD / CAM systems. The types and diversity of the sectors in which Coperma is involved allows them to have the flexibility and experience required for the full implementation of all projects they undertake.

Products and services

Module or function

- Boot
- Door module

Panels and components in wood derivatives for vehicle door and loading area coating.

Auxiliary services

- Engineering
- Logistics and transport
- Process outsourcing

- Design, development and manufacture of wood and cardboard packaging and containers to protect and transport components.
- Stock management, logistics and JIT delivery services.
- Manufacture and CNC machining of wood and composite parts.
- CNC cutting and machining.

Processes and technologies

- Assembly
- Wood processing

- CNC cutting and machining.
- Software used: Katia, CAD-CAM.

Main customers

Stellantis, GKN, Faurecia, Gefco, Gestamp, etc.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 2
Auxiliary value chain

¹ Between 6,000,000 and € 17,999,999 - ² Between 21 and 100 employees

Company description

Copo Galicia started business in 2002 with the production of impact absorbers from various kinds of flexible and rigid foams for internal use in the different processes of the Copo Group. They have progressively incorporated new products including technical foams for a range of applications, and cutting and stitching processes. The latest incorporation of new products / processes is in sun visors.

Products and services

Module or function

Boot

Door module

Driving position

Engine compartment

Seats

- EPP, EPS and PUR parts for sound insulation and impact absorption.
- Anti-submarine seating parts for rear seats.
- Boot storage compartments.
- Toolboxes.
- Parts for internal usage including fillings used for reinforcement and / or impact absorption, for example in the headrests.
- Cutting and stitching of seat covers for internal use within the Group.
- Manufacture and production of sun visors from start to finish (from EPP bodies to plastic components and the complete assembly).

Auxiliary services

Logistics and transport

EPP packaging items.

Processes and technologies

Other technologies

Textile shaping

Copo Galicia has a number of production lines to make EPP / EPS parts as well as two production lines for making flexible PU parts. They also do the cutting and stitching of all types of fabrics and felts using specific and specialized cutting machinery for these types of products.

Main customers

Stellantis, GM, Denso, Grupo Copo.

<http://www.grupocopo.com>

Turnover ¹

Employees ²

Sales information

Main value chain Tier 2

¹ From € 18,000,000 ² Between 101 and 250 employees

Company description

Copo Ibérica was the embryonic start-up company which has now become Grupo Empresarial Copo. They started life in 1972 making seat fillings for the newly constructed Citroën plant in Vigo. Currently, they have a workforce of 173 and they supply polyurethane foam fillings for cushions and backrests, utilising 3 technologies: cold-blown foam, hot-blown foam and INALCO moulding. They have an extensive background and experience, as well as the continued support of the Copo Group Technology Centre, whose expertise allows continuous improvement to be our major resource.

Products and services

Module or function

Seats

- Traditional foamed parts (raw leather) using cold foam moulding (high Resilience (HR)) technology: gives the filling durability characteristics.
- Traditional foamed parts (raw leather) using hot foam moulding (Hot Cure): allows weight reduction of the parts, thereby contributing to the weight reduction of the vehicle and in turn to cost reduction.
- Incorporated "in situ" moulded parts using a new technology called INALCO which produces fully finished rear seats whilst maintaining the required high comfort levels and giving a considerable cost reduction.
- Headrests and elbow rests in polyurethane foam: currently manufactured by INALCO but can also be manufactured by traditional moulding.

Processes and technologies

Other technologies

Manufacture of polyurethane components using:

- 3 cold technology (HR) carrousels
- hot technology (HO) carrousel
- 1 INALCO carrousel for smaller parts (elbow rests)
- INALCO carrousel for larger parts (seats and back rests)

Main customers

Groupe PSA, Renault – Nissan, Grupo Volkswagen and General Motors, Faurecia, Lear, Johnson Controls, etc.

Cromados Estévez, S.L. (Autocromes)

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 - ² Between 21 and 100 employees

Company description

Cromados Estévez is a company with more than 45 years of experience in the galvanic sector. It is specialized in the anticorrosion protection of metal surfaces through the application of metallic and organic coatings such as: zinc and its alloys, industrial hard chrome, powder paint (lacquer) and Autoforesis Aquence®.

They carry out the study, design, establishment and management of treatment plants to serve their customers, with direct participation in all areas.

Products and services

Auxiliary services

- Automation and robotics
- Machinery and small integrated lines
- Process outsourcing

Anticorrosion treatment and coating for metal surfaces. Metal, organic and duplex coatings. Zinc nickel of high anticorrosive power, industrial hard chrome and electrolytic zinc plating with high coverage. Organic coating processes such as electrostatic powder and Autoforesis Aquence painting.

Other services:

Taking into account the client's activity, product range and production requirements, this company invests in its own in situ treatment lines.

They take part at all stages:

- Project design
- Coordination with suppliers
- Installation of facilities
- Management and use of treatment lines
- Control means

Processes and technologies

- Other technologies
- Surface treatments and finishes

- 1 alkaline zinc line (up to 6m of length)
- 1 acid zinc line
- 2 electrostatic powder painting lines
- 1 industrial hard chrome line
- 1 Autoforesis Aquence® line

Main customers

Denso Sistemas Térmicos España, S.A.

DENSO

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1

¹ From € 18,000,000 - ² More than 250 employees

Company description

Denso's aim with their project in Galicia is to set up a production facility for vehicle climate control and engine cooler modules for the major car makers in Spain.

Products and services

Module or function

Cockpit

Front End

– HVAC: controls not just the cabin temperature but also regulates air flow, humidity and purification. The HVACs made by Denso are characterized by their highly efficient heat exchange, lightness, reliability and compactness.

– ECM (Engine Cooling Module): Integrates various elements including the radiator, the A/C condenser, intercooler (CAC) and electric fan (ELV) Denso ECMs provide a high ratio of thermal efficiency by unit of exchange surface area and are a benchmark in terms of increased performance and, in turn, reduced weight.

– A/C Compressor: The compressors marketed by Denso Sistemas Térmicos de España are of the clutchless swashplate type and have a system to limit force in the pulley shaft, which acts as a mechanical fuse in case of blockage or overload. This avoids any damage to the vehicle's engine in case of any internal breakdown. The mechanical performance and its reduced weight are its major characteristics.

– HVAC Controller: component which houses the elements which make up the interface between the user and the vehicle HVAC system. Manual and electronic versions are available, some of which incorporate an LCD information screen. It is also a decorative interior part of the cabin and needs to be in keeping with the aesthetic design stipulated by the car maker.

Processes and technologies

Assembly

Plastic shaping

INJECTION AREA: Plastic component injection line with 1300/900 t presses (Innovation: SMED system for rapid changing of moulds in under 1 minute); Plastic component injection line with 400/260/220/200 presses; Aesthetic plastic component injection line (HVAC Controller front) in 200/110 Tri t. presses.

HVAC Assembly Area: Lines for B78 + B9 automatic + B9 electric; for S4400 and S4530; for B9 manual; for M3M4 and for Renault X87/X98. In the M3/M4 models, the following process innovations have been incorporated: automated management system track HVACs movements along the line + checking bank based on machine vision.

Main customers

Stellantis, Opel, Renault, Mercedes Benz.

Diseño e Modelado de Superficies, S.A. (Demsu)

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 · ² Between 21 and 100 employees

Company description

Demsu started out in 1995 with the principle aim of meeting the demand for tools and moulds in the Galician automotive industry.

Their main activity is the design and manufacture of plastic injection moulds and control tools for the automotive industry.

Products and services

Auxiliary services

- Die-stamping and tools
- Maintenance and services

Main activities:

- Design and manufacture of plastic injection moulds and die casting.
- Repair, maintenance and modification of moulds built by the company or by others.
- Management and monitoring of moulds built in other countries.

Processes and technologies

- Metal shaping
- Other technologies

At their site -with a 1,000 m2 workshop and 300 m2 of offices – they have high-speed machining centres, Ona and Charmilles electro-erosion machines, adjustment and polishing zones, metrology room, 2D and 3D design software (Catia V5, Unigrafix and Mechanical desktop) and CAM software (Hypermill and Machining Strategist).

Drogas Vigo, S.L.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1
Auxiliary value chain

¹ From € 18,000,000 .² Between 21 and 100 employees

Company description

Drogas Vigo was founded in 1958. Today works for the automotive industry and is at the forefront of the chemical industry in the west of the Iberian Peninsula. With headquarters in Porriño, their main activity is the production of chemical products, the manufacture and mixing of solvents, waste management and the supply of logistics and outsourcing services. The group has 2 subsidiaries: Drovigo Portugal, logistics operator located in the chemical terminal at Aveiro Port (Portugal) and Regadi, authorized waste solvent management company. As a result of their efficient work, in 2007 Grupo Drogas Vigo was awarded the European HSSE-ESIG Award for 2007 (European Solvents Industry Group) and in 2014 they were nominated finalists for the ESIG AWARDS 2014 for the development of a solvent for cleaning robot hoods which gives a 2% reduction in VOCs.

Products and services

Auxiliary services

- Industrial supplies
- Logistics and transport
- Process outsourcing

- Manufacture of solvent mixes for paint dilution and special cleaning solvents with improved efficiency.
- Recycling and recovery of used solvents with the possibility of reformulating them for reuse in their initial usage.
- R&D to eliminate or substitute highly toxic products with new, lower toxicity ones, in keeping with the required specifications, improving efficiency, reducing VOCs and cycle time.
- Outsourcing chemical product transport services.
- Water purification.
- Logistics services.
- Solvents dilution paint and solvents cleaning robots.

Processes and technologies

Other technologies

- 5,000 m3 of solvent storage facilities.
- Automatically manufactured solvent mixture tanks and automatic packaging of pure solvents.
- Receiving bulk goods by sea.

Main customers

Its clients mainly include automotive companies such as Stellantis, VW Autoeuropa or TRW.

Elecpor Instalaciones y Mantenimiento, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 ² Between 21 and 100 employees

Company description

Electrical installation is the main activity of Elecpor. Due to their permanent service of electrical maintenance in automotive companies, they have acquired great experience in robots. They have different robotic cables and spare parts in stock. Moreover, at their maintenance workshop they have all kinds of spare parts for a quick repair of robot programming consoles.

Products and services

Auxiliary services

Maintenance and services

At their facilities they have two models of robots, with which they carry out the material testing before delivering it to their customers.

Processes and technologies

Assembly

Other technologies

- Repair / replacement of ABB robot cables and programming consoles (Teach Pendants)
- Electrical installations and panels of low and high voltage
- Industrial Maintenance

Turnover ¹

Employees ²

Sales information

Main value chain Tier 3

¹ Between 1,500,000 and € 5,999,999 - ² Up to 20 employees

Company description

- Embalán Ibérica started its activity in the early 90s.
- The philosophy of the company is oriented towards its clients and their full satisfaction. It seeks to be a reference provider, combining quality, service and price.
- The company is already in the second generation, which allows it to combine its extensive experience with an updated vision of the market and new technologies, printing processes, finishes and materials, betting on the use of recycled materials and the elimination of plastic single use in the production process.

Products and services

- Manufacture of labels in any format.
- Distribution of printing consumables.
- Distribution of radio frequency labels using RFID.
- Distribution of heat transfer printers.
- Stationery supplies.
- Offset, digital and flexo printing.
- Hot and cold stamping.
- Screen printing and reliefs.
- Design department.
- Stock management and schedules.
- Logistics and Transportation.
- Industrial supplies.

Processes and technologies

- Printed label lines (offset, flexo and digital).
- White label die cutting lines.
- Inspection and rewinding line.
- Screen printing line, hot and cold stamping line.
- Lamination line.
- CTP technical office department and plate processor.
- Digital printing on sheets and rolls.
- Cutting plotter for sheets and coils.
- Printer with certified color proofs.

Emenasa Industria y Automatismo, S.A.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 6,000,000 and € 17,999,999. ² Between 21 and 100 employees

Company description

EMENASA INDUSTRIA Y AUTOMATISMO, S.A. is a company with extensive experience in industrial installations, process engineering, automation, robotics and transport systems that offers its customers a personalised integrated service with innovative technological solutions adapted to their needs. The company was founded in January 2016 to lead, in the Emenasa Group, the terrestrial industrial activity, mainly focused on key Galician manufacturing sectors such as the automotive industry. They have own staff at all project stages, from the design to the construction, installation, programming, implementation and production support.

Products and services

Auxiliary services

Automation and robotics

Die-stamping and tools

Diverse

Engineering

Machinery and small integrated lines

– Industrial installations

– Welding cells

– Production lines and special machinery

– Tools and models

– Design and installation of conveyors

We have a highly qualified team of professionals as well as the most advanced technological resources. All this enables us to successfully develop every and each one of the stages in a project, being able to provide innovative and customised solutions for any kind of industrial facilities, the construction of production lines and special machinery, the design and manufacture of welding lines as well as the manufacture of tools and models.

Processes and technologies

Other technologies

We have space to carry out the trial assembly of the machinery and the lines we manufacture, also with capacity to produce parts if required by the final customer. We have advanced quality monitoring tools, machining workshop, assembly and adjustment area as well as a testing workshop for machines, robots and artificial vision.

Main customers

Stellantis, Gestamp Group, GKN Driveline, Denso STE, Borgwarner, Grupo Copo, Opel, etc.

ERRECÉ – Racks&Containers

Turnover ¹

Employees ²

Sales information

Main value chain Tier 2
Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 - ² Between 21 and 100 employees

Company description

Errecé arose as a natural evolution in a company with a family tradition, which for decades had been dedicated to the manufacture of agricultural machinery at a national level. As a result of a strong technological investment, the company became an important supplier to the automotive industry, while at the same time achieving a great position in other sectors. Today Errecé works as a supplier to the main automobile manufacturers and develops its own products that it exports to international markets from its technical and innovation departments.

Products and services

Auxiliary services

Engineering

Logistics and transport

Maintenance and services

Metallic packaging media

– Design and manufacture of standard and special logistics solutions.

– Manufacture of containers for automotive parts.

– Manufacture of logistics trains.

– Maintenance of containers and cars.

Processes and technologies

Assembly

Joining processes

Metal shaping

Surface treatments and finishes

Laser cutting, CNC bending, CNC machining, CNC rod shaping, robotic welding, robotic Epoxy/Plastisol lacquering.

Main customers

Errecé metal packaging is distributed among a large number of companies dedicated to mechanical production, highlighting Tier 1 companies in the automotive sector.

Europrecis Galicia, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 - ² Between 21 and 100 employees

Company description

Europrecis Galicia S.L. has been operating on the world market since 1981. The company is well known for the design and production of models for the automotive industry, tools for the naval, aviation, food, solar and wind industries, machinery for the stone and marble industry, precision machining, and generally all kinds of specialist machinery.

Products and services

Design and construction of tools; CNC machinery; 5-axis machining; large-scale machining; construction of specialist machinery; preventative maintenance and repair; reverse engineering; component digitalisation; dimensional control; 3-dimensional measurement of components; measurement of components on client's site using Faro Gage measuring arm.

Auxiliary services

- Automation and robotics
- Die-stamping and tools
- Engineering
- Machinery and small integrated lines
- Maintenance and services
- Process outsourcing

Processes and technologies

- Assembly
- Joining processes
- Metal shaping

Lathes, routers, machining centres, boring drill, electro-erosion area (penetration and wire-cutting), grinding area (grinders and lappers), drilling and threading (column and radial drills, pneumatic thread former), fine-tuning area (fully equipped fine-adjustment benches), welding area (MIG / MAG and TIG welding), other machinery: vertical band saws, flat band saws, hydraulic presses and bridge cranes); metrology area (three-dimensional measuring, profile projector for measuring angles, vertical column, Faro measuring arm with laser scan, optical micro-aligner, laser trucker); technical office (Solidworks, Catia v5 + 5-axis machining module, 5-axis Camworks , Geomatic, InCa 3D, Autocad Mechanical).

Evestel Iberia, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 .² Up to 20 employees

Company description

Evestel specializes in offering integral solutions for the safe and efficient management of vehicle fleets, providing a wide range of services focused on the optimization and safety of transportation. It also develops EmotAI, a driver-oriented tool with critical event detection to improve safety and efficiency while driving, a solution based on computer vision and Artificial Intelligence.

Products and services

Module or function

- Central console
- Driving position
- Engine electronics
- Safety electronics / vehicle dynamics
- Sistemas de información

EmotAI is a non-invasive tool to identify driving behaviors and the physical and mental/emotional state of the driver through advanced methods of Artificial Intelligence and Machine Learning, specifically in deep learning models (Deep Learning) for 3D image (video). The objective is to be able to identify through the video image (non-invasive) the phases of driving with high safety risk and / or decreased comfort, factors that correlate directly with the increased risk of motor vehicle accidents. The final result of this project is the implementation of safety and coexistence functions between vehicle and driver, creating an interactive mobility in the interior space of the vehicle to make driving much safer and more pleasant.

Auxiliary services

- Engineering
- Maintenance and services

Exla Packaging Solutions, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 - ² Between 21 and 100 employees

Company description

Exla is a company that specializes in all types of dedicated and returnable packaging. They carry out the design, manufacture and marketing of tailor-made reusable flexible or rigid packaging solutions for transporting components related to the production lines in the automotive, aviation, rail, food industries, etc.

Products and services

Auxiliary services

- Engineering
- Logistics and transport

– Design, development and manufacture of tailor-made packaging to meet their clients' needs, for long duration series, using technical fabrics, PPEA, PER foam, which cover the protection of components and bring cost savings in logistics and required ergonomic level. Exla Plásticos has its own technical offices which carry out the design of the dedicated packaging in keeping with the geometry of the components, the critical parts of these and the optimisation of returns. Manufacture of prototypes and packaging series depending on the developed solutions.

– Secure transport of decorative components.

Processes and technologies

- Assembly
- Joining processes

– CNR cutting and machining technology.
– Handling of Evolon, Tyvek, Akilux, C.P., PP and PE.
– Manufacturing of logistic furniture for kitting, made of durable material combined with textile divisions to protect the parts. Screw-less connections, via tongue-and-groove joint and weld bead.
– Assembly line and assembly of metallic, plastic and textile packaging elements.
Regarding process innovations, the company is currently participating with AIMEN in the development of a pulse welding system for thermoplastics; the project is financed by EFERD funding.

Formel D España, S.R.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ From € 18,000,000 ² More than 250 employees

Company description

We are the supplier that helps vehicle manufacturers and suppliers to guarantee the quality of their products and process chains. As a partner of OEM's and TIERS, we are available in 20 countries. We have resources and solutions to ensure the quality of vehicles and components, as well as to strengthen the implementation and optimization of service processes.

Products and services

Auxiliary services

- Diverse
- Engineering
- Process outsourcing

We offer our services throughout the automotive value chain, from product development to production and after-sales service. This end-to-end approach, together with our specific knowledge and extensive experience, creates synergies that play a role in the optimization and quality assurance of products and processes throughout the entire supply chain.

We are backed by a powerful and comprehensive range of quality and production services and we are your experienced partner for all general work related to the automotive industry during development, production and after-sales service.

Processes and technologies

Other technologies

In the area of product development: development of test vehicles, vehicle testing and homologation.

In the production area: location of suppliers and availability, management of launch and serial phases, quality management, assembly with added value.

In the after-sales area: service management, vehicle management, dealership management, warranty management.

Lines of innovation in our concept of Quality Confirmation Center (e-QCC): We take care of the entire long-term quality control process, from communication with the supplier to ensuring the correct quality and quantity of the parts, in the plant and outside in the own facilities.

Countless Tier 1 and Tier 2 suppliers are involved in the complex manufacturing process of a car. This means that quality assurance includes an increasing number of in-product checks that processing manufacturers prefer to put into the experienced hands of the Formel D Group. Comprehensive quality assurance measures of this type produce large amounts of data that the Formel D's innovative e-Report shows in a particularly effective, quick and easy to use way, while taking into account specific requirements and ensuring traceability.

¹ From € 18,000,000 ² More than 250 employees

Company description

CTAG, the Galician Automotive Technological Centre, is an entity created in 2002 involved in the research, development and technological innovation for the automotive industry. More than 600 engineers and technical personnel work at the different stages in the development of new products and processes, from applied research through to validation during its serial production.

Products and services

Auxiliary services

- Engineering
- Process outsourcing
- Technological centres

CTAG offers integral solutions for the development of innovations and big industrial projects. It is involved at all development stages, from applied research and concept definition through to product-process validation. Additionally, CTAG carries out its own research lines with regard to the future of the Sector, among we can stand out: ADAS systems and autonomous driving; New materials (bio-polymers and intelligent materials); Industry 4.0

The Centre provides services in the following areas: CAD Design; Calculation and virtual simulation; Rapid prototyping; Electronics: Development of vehicle intelligent systems (HW, SW & HMI) and ADAS systems validation, automated driving, connectivity, electro-mobility and comfort; Testing laboratories: vibration and acoustics, fatigue, climate, materials, engine, metrology; Passive safety; Process engineering: flow and layout analysis, design, simulation and development of automated cells, control systems by artificial vision, design of production and control tools, collaborative robotics, digitalisation and big DATA (industry 4.0); Technological consultancy.

Processes and technologies

Other technologies

Facilities and equipment for testing both complete vehicles and automotive systems and components:

- Low speed tracks
- Driving simulator
- Inverse catapult to carry out impact tests with instrumented dummies
- Software to perform calculations on structural, impact, fluid-dynamics, vibration and kinematic studies
- Laboratory for plastics injection
- Laboratory focused on Industry 4.0 processes

Main customers

Stellantis, Borgwarner, Viza, ZF, Faurecia, etc.

Company description

Galicia Auto Estampación (GAESA) belongs to IPM Rubí, an industrial Group specialized in the stamping of steel and aluminium parts, welding and painting of assemblies, with production plants in Vitoria (2), Abrera (Barcelona), Ribadavia (Ourense) and Brandys Nad Labem (Czech Republic).

Products and services

Module or function

- Boot
- Cockpit
- Door module
- Driving position
- Front End
- Ground contact system
- Rear end
- Roof
- Seats

Stamped metal parts/assemblies (in normal/high elastic limit steel and/or aluminium) which are later welded or assembled and may be applied subsequent operations such as painting or other surface treatments.

Auxiliary services

- Logistics and transport
- Process outsourcing

Galicia Auto Estampación has a 5-axis 2D and 3D laser cutting facility. It also carries out the integral logistics of the Group and their customers.

Processes and technologies

- Assembly
- Joining processes
- Metal shaping
- Other technologies
- Surface treatments and finishes

GAESA´s factory has the following processes and production means: 2 progressive press lines (one of 400 – 800 t and the other one of 1,000 – 2,000 t) for aluminium and normal/high elastic limit steel stamping; 2D and 3D laser cutting; MIG-MAG and resistance welding in robotic and automated facilities; finishing and control operations; roll forming; logistic services.

At the client´s request, GAESA can subcontract other IPM RUBI Group companies to carry out the following activities: stamping on conventional, transfer or progressive presses (from 100 to 2000 t), painting processes and other surface treatments.

Galmetec, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 .² Up to 20 employees

Company description

Galmetec is a company specialized in distribution, advice on choice of materials according to application and machining of technical plastics for industry.

Products and services

Auxiliary services

- Die-stamping and tools
- Machinery and small integrated lines
- Process outsourcing

Galmetec is present in the material handling sector manufacturing cams, roller guides, guides, rollers and sprockets. It also specializes in technical plastics, supports, stabilizers and spacers, all in composites for induction applications.

Processes and technologies

Other technologies

This company has different processes and technologies, among them:

- 3 Machining centers of 3,4 and 5 axis specific for the machining of plastics and composites with sizes up to 3000×2000 mm with mechanical and vacuum clamping.
- 3 Machining centers for finishing of single plastic parts.
- 2 machining lathes for finishing of single plastic parts.
- 2 Dimensional control machines.

Gestora Comercial Internacional, S.L.U. (Gecoinsa)

GESTORA COMERCIAL INTERNACIONAL, S.A.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 ² Between 21 and 100 employees

Company description

Gecoinsa offers packaging solutions and integral logistics adapted to the requirements of the automotive industry. With a business culture focused on excellence in service, quality and technological innovation, they apply models aimed at continuous improvement, process efficiency and working methodology. Being ISO 9001, ISO 14001 and ISO/TS 16949 certified, Gecoinsa has production centres in Vigo, Madrid and Tangier, all of them with lines for packaging manufacture, conditioning of replacement parts and integral logistics. Gecoinsa: more than 30 years engaged with our customers' objectives.

Products and services

Auxiliary services

- Diverse
- Industrial supplies
- Logistics and transport

Design and manufacture of packaging. Starting with 3D modelling, they develop product specific packaging which effectively protects the contents, with assembly cost and space savings. Modules CKD and replicas of life-series containers, palletized cardboard boxes (CDC PSA, Renault, Nissan, Ford), wooden crates, carton packaging, pallets and pallet components, corrosion inhibitors, desiccants, plastic bags and other packaging consumables.

- Integrated Just In Time Logistics.
- Reverse logistics, management of warranted parts.
- Conditioning, packaging and pre-assembly of automotive components (spares, production series, CKDs, DKDs and SKDs).
- Quality assistance service: recovery, classification and repairs, resident technician.
- Supply of labels, nails, hand tools, plastic bags, boards, etc.

Processes and technologies

- Joining processes
- Surface treatments and finishes
- Wood processing

Gecoinsa's Vigo site has 5,000 m² of built premises, 3,500 m² for production and 1,500 m² for warehousing. Their principle processes and means of production are: wood cutting line, automated wooden box manufacture line, CNC machinery for routing wood, HT thermal treatment chamber, packaging assembly posts, stapled assembly of packaging components and spare part conditioning posts.

Main customers

Stellantis, Renault, Nissan, Plastic Omnium, Faurecia, Gestamp, Grupo Antolín, TRW Daphimetal, GKN Driveline, Mann+Hummel, Denso, Visteon, Viza, Benteler, Inergy, Trety, Copo, CIE, SMP Ibérica, etc.

GKN Driveline Vigo, S.A.

Turnover¹

Employees²

Sales information

Main value chain Tier 1

¹ From € 18,000,000 -² More than 250 employees

Company description

GKN Driveline Vigo (previously Indugasa), was founded in 1973 by Citroën and Seat. Since 1986 it has been part of the UK based GKN, which employs 49,700 people and has a turnover of around 8.8 billion euros / year. The group has 5 plants in Spain, GKN Driveline Vigo being the largest. The Vigo production facility manufactures CV joints and drivetrains for rear-wheel drive vehicles and 4WD industrial vehicles. The latest technology and methodology is employed in their manufacture.

Products and services

Module or function

Transmission

- CV joints (6-8 bearings) for transverse and longitudinal transmissions. Manufacture of all functional parts: AC, UF, SX, PX, AC-HS disk , etc. Pioneers in the manufacture of the most innovative technology ("Countertrack").
- Manufacture of components for ball joints and the interconnecting shaft between the wheel side and the transmission side.
- Final assembly of complete driveline which incorporate the components manufactured by GKN – bellows, flanges, bearings and dampeners.

Processes and technologies

Assembly

Metal shaping

Surface treatments and finishes

GKN Driveline Vigo utilises highly specific and specialised processes in the manufacture of components and the assembly of drivelines:

- Machining: facing, turning, milling, drilling, grinding, hard routing. All their machinery and tools are specific and utilise the latest technology for serial production of their products.
- Thermal treatments: induction with piece by piece flow machinery, adapted to series processing and specific processes; cementation in batch process ovens and continuous process ovens.
- Assembly: Process designed expressly and specifically designed for their products.
- Paint: Supplier site at their facility, with specific process dedicated only to their product.

Main customers

As Tier 1: Renault, Nissan, GM, Ford, Stellantis, VW, Hyundai, Chrysler.

As Tier 2: they supply transmission components to companies at the GKN Group, which are later on sent to final customers such as Toyota, Land Rover, Audi, Volvo, Jaguar, Mercedes, Porsche, Kia, Honda, etc.

Gonvauto Galicia

Turnover ¹

Employees ²

Sales information

Main value chain Tier 2

¹ From € 18,000,000 ² Between 21 and 100 employees

Company description

Gonvauto Galicia is a steel transformation company which belongs to Gonvarri Steel Industries (GSI), a Spanish multinational company which is a market leader in its sector. Gonvauto Galicia started out in 2004 with the aim of creating a services centre to supply their main clients in the region: Stellantis Vigo, Gestamp Vigo and Gestamp Portugal. They manufacture sheet metal for the automotive industry utilising longitudinal, transversal and silhouette cutting processes. Since its inception, Gonvauto Galicia has provided an effective and efficient service to their customers, responding flexibly to all their needs and offer a wide range of sizes and qualities, for which they utilise modern automated cutting and stacking systems. The factory receives raw materials by road, rail and sea thanks to its strategic location in Marín Port.

Products and services

Module or function

Raw materials

They produce coils, strips and flat format sheets of metal from steel rolls, the raw materials for the stamping, laser welding and profiling processes of their clients. They have a production capacity of 170,000 t/year and they can process the steel grades most widely used in the automotive industry, including high elastic limit materials.

Processes and technologies

Metal shaping

Two slashing lines, capable of cutting sheet metal up to 4mm, including high elastic limit materials. They utilise an assembly robot with cutting arm which allows high productivity and reliability in the cut.

2 silhouette cutting lines, cutting press (630 t) which can house pieces of up to 4.5 m in length. They utilise a stacking robot, a solution which is a huge innovation in the industry.

1 transverse cutting line which produces rectangular and trapezoidal pieces at high production rates.

Gonvauto Galicia offers an integrated service, from the sourcing and processing of the steel through to its delivery, including quality management. Their large warehousing facility (up to 25,000 t), together with their experience in the sector, allows the company to develop best-practice raw material management, a key point in the steelworking industry. During the development stage of new models their experience can help to achieve important cost savings in raw materials thanks to the optimised design of the cutting layouts.

Grupo Tecnogap Atlántico, S.L.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 2

¹ Between 1,500,000 and € 5,999,999 - ² Between 21 and 100 employees

Company description

TEGNOGAP is specialized in producing moulded plastic parts by injection. We have 16 injection machines ranged from 50 to 500 tons of clamping force. We count on bi-components and vertical clamp injection machines to produce parts with metal inserts, etc. We have over 12 years of plastic manufacturing expertise in automotive, electronics and aerospace sectors as well as other industries. We provide "turnkey" solutions, from the concept and development of the required tools, to the mass-production and the delivery to the customer under optimum conditions. We are supported by the ISO 9001 and ISO EN 9100 quality certificates.

Products and services

Module or function

- Cockpit
- Front End
- Ground contact system
- Seats

We manufacture in a wide variety of materials: PP, PA, POM, ABS, SAN, PC, PS, PBT, PMMA, TPE, etc. We work with cutting-edge materials in order to improve the product properties. Our parts are placed in the interior (seat protectors, dashboard parts, glove compartment trims) and the exterior of the vehicle (hubcaps, handle trim), and may be technical and decorative parts. In the automotive sector, we supply parts for the B9, M3-M4 and B78 models. We also have projects for Airbus A320. In the electronics field we manufacture tracking products (vehicles and people) and home automation for house comfort.

Processes and technologies

- Assembly
- Plastic shaping

Our machine park consists of 16 injection machines from 50 up to 500 tons. Most of them are from the prestigious brands Battenfeld and Engel. We perform bi-component injection with perpendicular injection to the main spindle. We also have a vertical clamp injection machine for over-moulding metallic inserts or other components. Moreover, we assemble components on the injected parts.

Main customers

HGA offers a software called E-TRACE for the traceability of production lines. Among its main characteristics, the following stand out:

- Flexibility of configuration and independence of use without the need for third parties.
- Ease of use in a friendly web environment.
- Centralization or homogeneity: The entire plant managed from the same environment.
- Integration and communication with third-party software (SAP, FORCAM, etc.).

Once the traceability data is collected from the PLCs (Programmable Logic Controllers), it allows:

- Manage the production line.
- Control of defects, with management of instructions and automatic rework, and recovery of parts.
- Carry out rework of parts in production and test mode.
- Obtain the traceability of the piece and from the same form be able to mark the piece as scrap.
- Display of production, trace and defect histories.

Turnover¹

Employees²

Sales information

Main value chain Tier 2
Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 -² More than 250 employees

Company description

Ilunion Servicios Industriales Galicia was founded in 1998 as an initiative of the Fundosa Group and started its activity in early 1999. In March 2010 it became 100% part of the Fundosa Group (Once Foundation).

Initially, this Special Employment Centre was focused on the lining and stitching of leather for the automotive industry; in 2006 they opened a second centre dedicated to plastic injection.

Currently, and whilst maintaining their previous business lines, they are expanding their activities to include service externalisation. Thus, this company focuses on the industrial field and has three main areas of activity: logistic services, assembly in industrial processes as well as quality, selection and reprocessing controls.

- Driving position
- Seats

Ilunion Servicios Industriales Galicia (Centre I): manufactures car components, steering wheel covers, handles and car seats, selection and re-working. Ilunion Servicios Industriales Galicia (Centre II): plastic injection, the injection and assembly / pre-assembly of sub-components.

Auxiliary services

- Logistics and transport

This company also works in service externalisation: quality control, logistics services, industrial assembly, reworking and selection (recovery of defective parts and components).

Processes and technologies

- Assembly
- Joining processes
- Plastic shaping

They utilise injection moulding presses (100 – 400 t) and ultrasound welding.

Main customers

Faurecia Automotive (Ourense), Megatech (Amurrio and Ourense), Inplasor and Inplasor Group.

Incalplas, S.L.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 3

¹ Between 6,000,000 and € 17,999,999. ² Between 101 and 250 employees

Company description

In late 1993 the company starts its activity in the field of plastic transformation. They are located at the Chorente Business Park, at 15 km from Ourense and they have 4,800 m2 of covered surface in a total 14,000 m2 site.

Products and services

Module or function

- Cockpit
- Door module
- Exterior elements

Incalplas works in the production of the following automotive components: glove-box trim, mounting brackets, sidewalls, steering column halves (lower and upper), radiator grilles, air conduits, carpentry / trim (upper / lower / floor), front and rear glove-boxes, front and rear cross laminated bumpers, half mats, covers, etc.

They also produce replacement parts including: side protectors, glove-boxes and combination reinforcements. Other Products: Side coverings, fuel tank covers, front covers, doors and panels, covers and fuse panels.

Processes and technologies

Plastic shaping

The company has 14 mono-material injection machines for plastic parts from 250 to 1200t.

Main customers

Faurecia Automotive and Plastic Omnium Componentes Exteriores.

Indea Auriense, S.A.

Turnover¹

Employees²

Sales information

Main value chain Tier 2

¹ Between 6,000,000 and € 17,999,999. ² Between 21 and 100 employees

Company description

This company is involved with the manufacture of thermoplastic parts by injection as well as with the assembly of auxiliary components. Was founded in 1990 and since 2006 carries out its activity in their modern, well-equipped new facilities, with 5,000 m2 of covered area in a total 10,000 m2 site. The recent creation of a development department has allowed them to provide a complete service to their clients, from the design of the part through to the product and process validation.

Products and services

Tanks

– Mass-production of injected plastic parts in a range of sizes (from small assembly clips and fuel pipettes up to wheel arches, dashboards and seat backrests), primarily for the automotive industry.
– Wide range of raw materials utilised (PP, PE, PA, PA GF, PP GF, POM, ABS, etc.).
– Complete project management from numerical definition, monitoring, development, industrialization and mass-production.

Processes and technologies

Assembly
Joining processes
Plastic shaping

– 16 injection machines from 125t to 2,300t, allowing the company to produce parts from a few grams up to 10 kg in weight. Controlled closed circuit water cooling.
– 6 raw material storage silos. Automated plant with centralized treatment of the raw material (dehumidification, drying and pneumatic transport).
– SEPRO precision robots in each machine.
– All types of assembly at the foot of the machinery (welding, assembly, marking, etc.) and within the mould (over-moulding, inserts, etc). hotplate and ultrasonic welding machines; specific assembly machines, poka-yokes and artificial vision.

Main customers

ACS, Autoneum, Faurecia, Trèves Group, Inergy, Lear Corporation, Megatech, Plastic Omnium, SMRC Automotive Interiors Spain, SMP, Trety etc.

Industrias Abalde, S.L.

Turnover¹

Employees²

Sales information

Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 - ² Between 21 and 100 employees

Company description

Industrias Abalde S.L. was formed in 1988 with the business plan to manufacture a wide range of carbon steel, stainless steel and aluminium products. Their plant is versatile and has 3 x 5,000 m² units in the A Pasaxe-Vincios industrial estate near to the city of Vigo. They have a highly trained team, certified welders and the latest technology machinery. The quality of their products is backed up by their expertise and many years of experience. They have worked supplying machinery and equipment to the major companies in the automotive industry. At this time, they are in the process of expanding their market and are internationalising the company as part of their pledge to continual improvement.

Products and services

Metallic transformations: laser cutting, punching, folding, saw cutting, welding; profile bending; technical office; logistics warehouse.

Auxiliary services

Machinery and small integrated lines

Process outsourcing

Industrias Abalde's services are focused on the manufacture of tailor-made products. They work from our clients' plans, following their indications faithfully. They have a technical office with CAD / CAM systems and IT programs (Autocad, Solidworks) to help in manufacture and they can take orders in Spanish, English or French. They can work on a range of materials from thin plate to mid-thickness boilerplate and can produce structures, mechanically welded parts and mechanical assembly. Examples of some of their works are: component containers, transport and lifting systems, racks, rising systems, fairings and protectors, staircases and handrails, roto-sieves, presses, tanks, etc.

Processes and technologies

Assembly

– Bending, punching, folding, laser cutting, TIG and MIG manual and robot welding.

Joining processes

– We work closely with other companies in the industrial sector in Vigo to also offer: machining, hot galvanising, blasting, electrical assembly, hydraulic assembly, etc.

Metal shaping

Surface treatments and finishes

Main customers

Lear Corporation, ABB, OTIS, Viza, Borgwarner, Inergy, HTP Industrie, Clemessy, etc.

Ingeniería Gallega de Sistemas Automatizados, S.L. (Ingalsa)

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 ² Between 21 and 100 employees

Company description

Ingalsa is a company dedicated to the design, manufacture and installation of all types of machinery and means of control. Designs and builds machines and manufacturing lines adapted to specific customer needs for the automation process. In all machines and developed automatism assumes full responsibility of the projects, from the design to the launch.

Products and services

Auxiliary services

- Automation and robotics
- Engineering
- Machinery and small integrated lines

The main lines of work are as follows:

- Design and manufacture of special machinery
- Robot systems
- Machine Vision Applications
- 100% control machines
- Process automation

Processes and technologies

- Assembly
- Metal shaping
- Other technologies

It has the following own means to carry out turnkey projects:

- Design engineering
- Department of PLC, CNC, Robotics and Artificial Vision programming
- Section of mechanical manufacturing
- Section of installation and adjustment
- Automatic Department
- Section of control and measurement

It has 300 m2 of technical office and a warehouse of over 1,000 m2 with 5 axes and 3 axes machining centers, milling machines, lathes, grinders, etc. It performs machining in 5 axes CAM with NX CAM 9 software. It has a heated metrology room with three dimensional CNC.

Ingeniería y Fabricación del Norte, S.L. (Nort3D)

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000. ² Up to 20 employees

Company description

Engineering company focused on additive manufacturing and product development. It offers solutions for additive manufacturing both in the manufacture of parts and in the development of new solutions or the implementation of manufacturing systems in the plant. Nort3D is a specialist in solutions for optimized supports, claws and end-of-arm elements.

Nort3D is a specialist in 360° solutions in the optimization of products / processes from the acquisition of data by 3D scanning, the engineering or reengineering of the product or accessory element to its unit manufacture or in short / medium series.

Products and services

Auxiliary services

Diverse
Engineering

- 3D scanning.
- Reverse engineering.
- Dies and tools.
- Additive manufacturing.

Processes and technologies

Other technologies
Plastic shaping

- Extensive additive manufacturing machinery in polymeric materials with the most innovative technologies on the market (FDM, SLA, SLS, etc.).
- Equipment for the production of flexible elements in short or medium series using thermosetting resins.
- Workshop for adjustment, assembly and control.
- Non-contact 3D scanning equipment with MCC, portable arms or computed tomography.
- Reverse engineering and on-site measurements.
- Additive manufacturing in metallic materials (316L stainless steel, aluminum, inconel, etc.).

Main customers

GKN Driveline, Aludec, BorgWarner, ZF-TRW, Marsan, Denso TS, Esypro, Gestamp, Utingal.

Inoxidables Fegosan, S.A.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 2

¹ Between 1,500,000 and € 5,999,999 - ² Between 21 and 100 employees

Company description

Inoxidables Fegosan was founded in 1964, and worked in stamping and manufacturing cutlery. In 1974 the company moved into the automotive industry, working as an OEM for Citroën and General Motors. In 1988 they started to work with Dalphimetal España and Silenciadores PCG, strengthening their position as an automotive auxiliary, manufacturing components for steering wheel frames and exhaust pipes. Currently, its strategy involves the promotion of stamping activity, in addition to complementary processes for the manufacture of small modules and sub-assemblies, highlighting the areas of welding, assembly by manual resistance, robotized and MAG welding.

Products and services

Automotive Stamped Metal Parts

Processes and technologies

Joining processes

Metal shaping

Metal shaping: Stamping.

Joining processes: Welding and insertion of components.

Seats

– Injection moulded and overmoulded plastic parts from a wide range of materials (PP, ABS, PC, ABS/PC, PA, acetyl resin, TPE, EPDM, etc.). Examples: doors and door liners, glove-boxes, ashtrays and cup holders, dash components, speaker grilles, climatization and sound proofing system components, etc.).

Overmoulding plastic onto aluminium.

– Assembly of aerators for the X84, B58 and B57 vehicles and air conduits assembled with insonos.

– Assembly of ashtrays and cup holders for the NCV2.

– Plastic parts covered with leather via gluing (eg. B78 consoles, etc.).

– Injection of parts for the food industry.

– Plastic corners for packaging, electrics, electronics, construction, aviation, etc.

Auxiliary services

Die-stamping and tools

Logistics and transport

– Design and development of moulds (Autocad, Unigraphics, Cadra).

– Logistics services adapted to the needs of each client.

Processes and technologies

Assembly

Joining processes

Other technologies

Plastic shaping

The company has the following lines and means of production: 18 fully equipped robotic plastic injection machines (80 – 800t); aerator assembly lines with presence sensors and poko-yokes (X84, B58, B78); assembly lines; gluing leather to plastic components (e.g. B78 dashboards); assembly of ashtrays and cup holders (NCV2); plastic injection over aluminium; design and development of plastic injection moulds.

Control methods: 3D vision, feeler gauges, callipers, micrometers, balances, etc.

Other tools used: ERP system, EDI system for exchanging data with clients / suppliers, quality agreements to deal directly with the end client, various packaging and labelling options according to the logistics destination and control labels which ensure the quality and traceability of each product.

Main customers

Faurecia Automotive España (Ourense, Tarazona), Faurecia Interior Systems (France), Denso Sistemas Térmicos (Vigo), ACS Ibérica (Ourense), Ascensores Enor and Aiadesa Group (Alicante).

Inprosec Auto, S.L. (InprOTech)

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1
Auxiliary value chain

¹ Less than € 1,500,000 - ² Up to 20 employees

Company description

This company was born in 2017, as a division of the parent company Inprosec, with the aim of verticalizing its service portfolio and guiding it to the new technologies of Industry 4.0 in the field of the automotive sector. It offers cybersecurity consulting and auditing services from a logical and strategic point of view, covering the security needs of companies and which represent a challenge to guarantee integrity, confidentiality and availability in industrial environments. In addition, InprOTech has an I + D + i department dedicated to developing products aimed at improving cybersecurity in industrial environments.

Products and services

Auxiliary services

Diverse

InprOTech offers audit and consulting services for industrial cybersecurity with proprietary methodologies based on standards such as ISA / IEC 62443 and NIST SP 800-53 and 800-82. In addition, it offers consulting services based on specific regulations for the automotive sector with the VDA-ISA standard.

Processes and technologies

Other technologies

InprOTech develops a product aimed at industrial cybersecurity in charge of managing and analyzing all the events that occur in an industrial environment and that may compromise business continuity.

Kaleido, Ideas & Logistics

KALEIDO

IDEAS & LOGISTICS

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 - ² Between 21 and 100 employees

Company description

Multinational specialising in global logistics with headquarters in Vigo and offices in Spain, Portugal, Mexico, Brazil, Argentina, Morocco, Angola, South Africa, India and China. Kaleido, thanks to its experience and logistic resources together with its R&D and innovation division, provide its customers with innovative solutions which range from software development to the implementation of Self Driving Vehicles (SDVs) technologies. Kaleido Supply Chain Management (Kaleido SCM) is the area specialising in transport logistics, warehousing and added value services. They have extensive and proven experience implementing integrated management systems and supply chain process standards. They offer tailored solutions either at their facilities or at the customer's ones, both in the Iberian Peninsula and abroad, placing special attention on the value contribution.

Products and services

Auxiliary services

Diverse

Logistics and transport

KALEIDO SCM covers the complete cycle of needs, from transport, customs dispatch and warehousing to added value logistic services (quality inspection, revisions, etc) in compliance with the customers requirements and specifications. Services:

- Warehousing with the possibility of customs, non-customs and temporary warehouse.
- Customs services
- Externalisation of in-house logistics
- Goods transport
- Goods insurance
- Added value logistic services (picking and re-packing; reworking)
- Logistic consulting solutions (evaluation and design of turnkey logistic projects, design and organisation of warehouses, design of stock control systems, etc.)

Processes and technologies

Other technologies

KALEIDO holds the following certificates: AEO (Authorised economic Operator), ISO 9001, 14001 and 166.002, EMAS, IATA, BIMCO, OHSAS and TRACE (anti-bribing). They provide advice on re-engineering processes, computing and innovative logistic alternatives, designing individual and immediate solutions.

Their most recent developments include:

- KARBONTRACK: tool for measuring greenhouse gas emissions in logistic projects.
- Indoor positioning system for the methods-time measurement, historic record of routes, heat map, unusual performance detection, etc.
- Tailored software development in warehousing and production environments.
- Implementation of Self Driving Vehicles (SDVs) and fleet smart management software.
- Centralised platform to integrate conditions and freight positions.
- Tool for monitoring and reporting greenhouse gases emissions linked to logistic projects.

Company description

Láser Galicia is a benchmark company for laser cutting, folding and welding of metal sheet and tubes in the northwest of Spain. This company, equipped with the most advanced technologies in the sector and located in the "A Granxa" industrial estate in Porriño, is backed by the experience of the Láser Ebro Group, national leader in laser cutting. Láser Galicia has the ISO 9001:2008, IATF 16949, IAQG 9100, EN 1090-2, EN 1090-3 and ISO 3834-2 quality certifications, awarded by AENOR.

Products and services

Auxiliary services

Process outsourcing

Laser cutting: carbon steel, inox, aluminium (25 mm), copper and tin (10 mm).

Tube cutting: 250 mm of max. diameter; 4500 mm of max length; and 10 mm of max. thickness in carbon steel, 6 mm in stainless steel and 5mm in aluminium.

Folding: up to 4 metres and 320 tonnes.

Welding: carbon steel, inox and aluminium.

Possibility to supply the finished part with the required surface treatments (painting, hot-dip galvanising, anodising, zinc coating, etc.). From prototypes to small, mid-sized and large series manufacturing.

Processes and technologies

Joining processes

Metal shaping

9 laser cutting machines – both CO2 and fibre lasers.

11 CNC folding machines, which are fully automated and programmed by a 3D CAD system .

Boilermaking area with certified welders (manual TIG, MIG & MAG welding and automated welding).

Tube cutting centre (with a 45° bevel cutting option).

Main customers

Láser Galicia's products are distributed to a wide range of companies dedicated to mechanical production, the most important being the automotive industry auxiliary companies.

Lear Corporation Pontevedra, S.L.U.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1

¹ From € 18,000,000 -² Between 101 and 250 employees

Company description

Lear Corporation Pontevedra started life in 1952 meaning that they have more than 50 years of industrial experience and tradition. In 2001 they were bought by Grupo Accionarial Antolín and at this point they started a new stage of growth and improvement; a move which brought about a general reorganization of the company in the search for greater efficiency.

In April 2017, Lear Corporation acquired the Antolín Group Seat Unit, forming part of a leading global company with great experience in quality and innovation.

With two plants, one in Porriño and the other in the north of Portugal, their activity is 100% focused on the automotive components industry. Lear Corporation Pontevedra is characterised by having its own development and industrialisation as well as the production of metal components in a range of technologies: profiling, ribboning, stamping, bending and welding. The company is oriented to customer satisfaction. Innovation is one of the pillars of the company's strategy; their leadership and guaranteed future-proofing guarantee products with high added value.

Products and services

Module or function

Boot

Door module

Driving position

Exterior elements

Front End

Rear end

Roof

– Passenger protection: load separators, lateral reinforcements, bumpers.

– Structure profiling: superstructure, impact absorption, roof arches.

– Window guide parts: window guides, window separators, power window tracks, door frames.

– Functional subassemblies.

As for innovations, it is worth noting that Lear Corporation Pontevedra has developed: new profiling processes in collaboration with suppliers and technology centres; a new concept of load separators for Groupe PSA, suppliers and technology centres; and a new solution for anchoring and sliding of door guides.

Processes and technologies

Joining processes

Metal shaping

– Metal transformation: development and production of metal components in a range of technologies (profiling, ribboning, stamping, bending and welding). The company offers highly flexible designs, weight reduction and reduced material use, contributing to a low investment cost. The use of ultra-high elastic limit materials means that the final product is at the cutting edge of their clients' needs in both price and technical characteristics.

– Lear Corporation Pontevedra also has a wealth of experience in the design and manufacture of tools and machinery for profiling systems.

Lear European Holding, S.L.U.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1

¹ From € 18,000,000 ² Between 101 and 250 employees

Company description

Grupo Antolín is a global supplier of automotive interior components that offers its customers a complete service from conception to design, development, manufacture and distribution of roofs, doors and seats. This Spanish multinational operates in 25 countries and has over 120 plants and 25 technical / commercial offices. The Group has the teams and the most advanced technologies which are easily integrated into the working structures of their clients, accompanying them in their projects worldwide, providing them "in situ" products and services of the highest quality. Lear Corporation Vigo started out 2005 with the aim of manufacturing the seats for the Citroën C4 Picasso (second and third rows). Currently, they manufacture the second and third rows of seats for the new Citroën C4 Picasso. The company has facilities covering a total of 23,000 m2 with 10,000 m2 used for production and around 1,400 m2 of offices.

Products and services

Module or function

Seats

– The company's main activity is the manufacture of the 2nd and 3rd row seats for the New C4 Picasso; they are assembled in Syncro and then supplied to the Groupe PSA Vigo factory. The seats can be manufactured with the following features: fold-down, sliding, comfort (backrest angle adjustment) and "cinema" function (the cushion lifts up against the seat increasing the space in the rear of the vehicle), amongst others.

– There is also a second line of products which consists of subcomponents which are used in both the C4 Picasso and the Peugeot 5008. In this aspect, the company operates as a logistics and adaptation centre prior to the parts being sent to the end client, Johnson Controls in Neuenburg am Rhein (Germany).

Both products have a range of textile coverings meaning that the possible number of finishes is doubled.

Processes and technologies

Assembly

The production area has 4 principle manufacturing lines (where the various components which make up a seat are assembled) and one auxiliary line with two assembly posts for the manufacture of the "Faux Plancher" which is a subcomponent of the row 2 seats. These lines are "stop and go" as they stop in pre-set positions so that the operator can do their part of the assembly. Once they finish, after a pre-set time, the line moves forward bringing the next seat to the post. The assembly tools have a memory card which stores the data needed for the manufacture of each seat as well as traceability data. These assembly tools also perform the necessary movements to eliminate the need to remove the seats to auxiliary work posts. The factory works on a JIT basis and their work runs in parallel with the production rate of the new vehicle.

Main customers

Stellantis.

Little Electric Car España, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 .² Up to 20 employees

Company description

Little Electric Cars develops, industrialize and market 100% electrical vehicles. They started up in 2010 with a factory in Mos. This company was created in response to the concerns of a group of automotive professionals, keenly aware of the need for environmental conservation. The components which their vehicles are made from are assembled in their factory meaning that they can be customized to the client's wishes. The company provides a clean alternative for travel in cities and coastal areas, both for individuals and for on-site fleets for companies with large sites, industrial estates or natural areas such as forest parks and zoos.

Products and services

Auxiliary services

Diverse

Little design, manufacture and market 100% electrical vehicles from their site in Mos, using European components. Currently, they make 2 models:

– The Little4: utility vehicle perfect for urban journeys. It can be made in cabriolet, vintage or commercial versions.

– The Ebox: launched in 2012 it is aimed at on-site fleets for companies with large sites, industrial estates or natural areas such as forest parks and zoos. The Ebox comes in 2 and 6 seat versions.

The philosophy of the company is to give the customer the product that they want. With this in mind they have created "The Factory": a unique personalisation service (fleet painting, accessories, adapted design and bodywork, artist decorated, etc.). This means that the client will have their own unique model.

Processes and technologies

Assembly

The design department creates a sketch of the vehicle which is then produced by the manufacture and assembly department. Through their rigorous quality control processes the company can produce their own technical data sheets. The entire manufacture process can be carried out in Little's premises.

Main customers

Iberdrola, Inditex, Empresa Cubana de Aeropuertos y Servicios Aeronáuticos (Ecasa), Mancomunidad Sureste de Gran Canaria, Zoológico de Viena, Parque Natural de Monfragüe, Realvi, Transimport, etc.

LK Mobility, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 .² Up to 20 employees

Company description

This company stands out in the field of innovation in the electromobility sector. It is responsible for the development of machines and software for the analysis and recovery of batteries of vehicles with electric components, i.e. hybrid (NiMH) and 100% electric (Ion-Li). It contains a management software for the exchange of modules for the maintenance of batteries, in addition to establishing the development of SaaS for the knowledge of the state of health (SoH) of the batteries, thus performing engineering projects in electromobility. It is also in charge of safety and maintenance training for vehicles with electric components.

Products and services

Auxiliary services

Engineering

Maintenance and services

Analysis, valorization and revaluation of vehicle batteries with electric components.

Processes and technologies

Electrical material

Automation of the process of analyzing the health status of Ni-MH (hybrid vehicles) and Lithium-Ion (100% electric) batteries.

Main customers

NEM Motors, Gomur Engines & Services, Centros Integrados de Formación Profesional de Galicia, Evocom, etc.

Logicmelt Technologies, S.L.

EDGE & AI TECHNOLOGIES

Turnover ¹

Employees ²

Sales information

Main value chain Tier 3
Auxiliary value chain

¹ Less than € 1,500,000 - ² Up to 20 employees

Company description

Logicmelt is a technology services company focused on modernizing and digitizing the automotive industry. It offers services for the development and implementation of systems for data capture, control, detection of defects and similar problems, based on the latest technologies in Artificial Intelligence and Edge Computing. Its objective is to help companies to update to the standards followed by Industry 4.0.

Products and services

Auxiliary services

Automation and robotics
Diverse
Engineering
Maintenance and services

- Assistance to the operator with artificial vision: it is based on the use of cameras in conjunction with advanced Artificial Vision techniques to develop low cost customized operator assistance systems.
- Artificial intelligence solution for the detection of PPE: it allows detecting the correct use of masks, helmets, boots or any other protection element, while avoiding access to dangerous areas.
- Defect detection solution using artificial vision: Logicmelt's Artificial Intelligence for defect detection is the perfect support for quality control, increasing effectiveness and reducing costs.
- Solution for the detection of anomalies: it allows capturing and processing data from the production process through Edge technology.

Processes and technologies

Metal shaping
Plastic shaping
Textile shaping
Wood processing

Logicmelt tries to cover the demand for technology for Industry 4.0 by offering two clear services that also allow it to stand out from the competition:

- AI provider: from the analysis of the value of customer data, to the design and training of AI algorithms, which, using previously captured data, generate an AI model that solves a specific problem.
- Edge provider: includes the physical implementation of data acquisition, processing and delivery algorithms using embedded electronic platforms.

Company description

Mantenimientos Industriales Sulcer was founded in 1994 with the aim of providing a repair and maintenance service for industrial machinery and equipment to several companies in the province of Pontevedra (Galicia). They carry out their activity in different sectors, such as the naval and automotive industries.

In 1998, Mantenimientos Industriales Sulcer started to provide metal cold stamping services, mainly for the Galician automotive industry. Since that date, the company has the equipment necessary to meet the needs, in terms of quality and production, of the major companies in this sector. The company also starts to sell industrial machinery (mechanical, hydraulic and eccentric presses, lathes, milling machines, etc.) across Spain.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 6,000,000 and € 17,999,999. ² Between 21 and 100 employees

Company description

MATRIGALSA is a Galician company with a strong track record in the Spanish industrial sector that focuses on the means of production to adapt to the latest technologies and current market conditions. It focuses on different areas that provide complementary services:

- Design and manufacture of aluminium and magnesium die casting moulds
- Management of plastic moulds with LCC support
- Moulds maintenance (plastic moulds, die casting, ...)
- Tooling and coils for induction heating

Products and services

Auxiliary services

Die-stamping and tools

They manufacture high pressure die casting moulds for technically complex aluminium and magnesium automotive parts, such as gear boxes, oil sumps, etc. They also manufacture sand core moulds and low pressure injection die casting for high-end vehicle suspension systems.

Additionally, Matrigalsa has machinery for specific machining processes.

Processes and technologies

Metal shaping

Other technologies

- High-speed, 3 and 5 axis milling machines for dimensions up to 3,000 x 1,600 mm
- Wire-cut EDM and spark erosion machines
- Fitting presses
- CNC turning and grinding of internal, external and plain surfaces.

Mecanizados Atlántida, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ From € 18,000,000 ² Between 21 and 100 employees

Company description

Mecanizados Atlántida S.L., founded in 1987, specialises in the design, assembly, construction, programming and commissioning of components assembly lines for the industry in general and specifically for the automotive industry. Although their market was initially only local, over the last few years they have expanded into international markets, currently exporting to all continents; this is one of the hallmarks of Mecanizados Atlántida. Their capacity and experience in components assembly (mainly metal parts) has allowed them to be involved in highly complex projects with a high level of robotization and the assurance of high product quality requirements to meet the needs of each specific industry.

Products and services

Auxiliary services

- Engineering
- Machinery and small integrated lines

- Capital goods and assembly lines.
- Grease dispensing equipment.
- Computer vision control equipment
- Specific inspection and poka-yokes systems

Processes and technologies

- Assembly
- Metal shaping
- Other technologies

Capacity to design, construct, automate and install components assembly lines

Main customers

GKN Group, AAM International SARL, Universal Balancing Ltd, DHB Industria e Comercio S.A.

Mecanizados Castro Galicia, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 - ² Up to 20 employees

Company description

Mecanizados Castro Galicia, created in 1996, is dedicated mainly to the development and manufacture of specific solutions for the improvement and automation of industrial production processes for the automotive sector.

Products and services

Auxiliary services

Machinery and small integrated lines

It develops custom solutions for assembly, verification and component manufacturing. It has a department of own design to create the machinery adapted to each need, according to the specifications of the client. It also has the necessary equipment for the manufacture and assembly of both manual and automated machines. This company has means for the machining of short series for automotive customers.

Processes and technologies

Other technologies

It has: technical office (department of mechanical design), production (machining workshop) and assembly (assembly area and machinery station).

Main customers

Grupo Maier, Grupo Antolín y Grupo Ezquerria.

Mecanizados Rodríguez Fernández, S.L. (MRF)

Turnover¹

Employees²

Sales information

Auxiliary value chain

¹ Between 6,000,000 and € 17,999,999. ² Between 21 and 100 employees

Company description

Mecanizados Rodríguez Fernández, S.L was founded in 1966 in the province of Ourense and is mainly involved with the manufacture of industrial bodywork accessories. They have wide experience in the design, development and manufacture of new metal products, mainly in stainless steel.

Products and services

Auxiliary services

- Die-stamping and tools
- Diverse
- Process outsourcing

- Manufacture of metal parts in stainless steel (AISI 304, AISI 316) and carbon steel by sheet metal forming process
- Welding of all kind of parts using TIG and MIG technologies. Robotic welding.
- Specialists in surface treatment by sandblasting and polishing of stainless steel parts.
- Technical department with great experience in the design of new products and their adaptation to the manufacturing processes.
- Design and manufacture of dies and all kind of tools for their own manufacture or for third parties.

Processes and technologies

- Joining processes
- Metal shaping
- Surface treatments and finishes

The main processes utilised at the MRF plant are:

- Stamping
- Bending
- TIG and MIG welding
- CNC
- Laser cutting
- Sandblasting
- Polishing.

Main customers

Chereau, Humbaur and Lecitrailer.

Megatech Industries Orense, S.L.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1

¹ From € 18,000,000 ² Between 101 and 250 employees

Company description

Megatech is an international automotive supplier, specialised in the development and production of systems, modules and plastic components for the interior and exterior of passenger cars, vans and commercial vehicles.

Products and services

Module or function

Boot
Central console
Cockpit
Door module
Engine compartment
Exterior elements
Front End
Rear end
Roof
Seats

The activity carried out by the Megatech plant in Ourense is focused on 7 different groups:

- Modules (central consoles, roof consoles, electronic boxes, etc.)
- Interior parts (pillars)
- Seat components
- Exterior parts (cowl top, water box cover, mudflaps, wheel covers, rear axle covers)
- Door panel components
- Dashboard components
- Electronic components (for other industries)

Processes and technologies

Assembly
Joining processes
Plastic shaping
Surface treatments and finishes

- Plastic material transformation via injection moulding (conventional injection, low-pressure back injection (IMD), 2K injection, 3K injection, multi-colour injection, gas and water injection). Presses up to 2,300 t.
- Processes, industrialization: laser cutting, wrapping, ultrasonic welding, modular assembly, vacuum plating, painting, assemblies

Main customers

Car manufacturers: Volkswagen, Audi, Skoda, Seat, Porsche, Bentley, General Motors, Mercedes Benz, BMW, Mini, Rolls Royce, Peugeot, Citroën, Toyota Peugeot Citroën Automobile (TPCA), Kia, Hyundai, Renault and Honda.

Tier 1 suppliers: Johnson Controls, Valeo, Faurecia, Plastic Omnium, Antolín Group, Mahle, Magna and Automotive Lighting.

Other customers outside the automotive sector: Bosch and Schneider Electric.

Mooxvice Solutions, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 ² Up to 20 employees

Company description

Mooxvice Solutions, founded in 2020, is an engineering company specialized in the implementation and deployment of IoT monitoring solutions in professional environments. It has advanced communications network technology solutions and a commitment to excellence to address the critical challenges of real-time monitoring, driving efficiency and decision making in the industry.

Products and services

Auxiliary services

- Diverse
- Engineering

Mooxvice Solutions brings its IoT monitoring approach, which offers flexible and highly efficient solutions to meet these needs. Through an innovative combination of wireless mesh topology networks coupled with distributed processing, it transforms the way companies optimize their industrial operations. Its key features are:

- Mesh Networking: AD-HOC routing; Self-organizing; Reliability and Fault Tolerance; Robust Security.
- Distributed processing: each network node performs distributed processing of the collected information. This means that each device has the ability to process data locally, reducing the network load and enabling faster and more accurate analysis.

Processes and technologies

Other technologies

Mooxvice has a variety of devices and systems that allow us to offer advanced technological solutions.

- Devices: equipped with ARMCortex processors, ranging from A7 to A53 models, with operating frequencies ranging from 800 MHz to 1.8 GHz. These processors provide robust performance for running a variety of applications. The RAM available on the devices ranges from 1 GB to 8 GB of LPDDR3 or LPDDR4, ensuring smooth performance and efficient multitasking for the most demanding applications. In terms of storage, the devices are equipped with options ranging from 4 GB to 32 GB of eMMC storage, allowing large amounts of data to be stored locally. All devices run the Yocto Real-Time Linux operating system, which is optimized for real-time applications and supports Docker containers, facilitating application development and deployment.
- Connectivity: The devices offer a wide range of connectivity options, including Ethernet, RS232, RS485, SDI12, PPI, Profibus, Profinet, ModBus TCP/RTU, EtherCAT, Wi-Fi, Bluetooth, 5G/LTE, NarrowBand IoT, ZigBee, DigiMesh and Lora. This ensures versatile and robust connectivity in a variety of environments and applications.
- Technical specifications: The devices are powered with a voltage of 7-36VDC, with a maximum power consumption of 7W, making them suitable for a variety of industrial applications. In addition, the devices are designed to operate over a wide temperature range, from -40°C to 85°C, making them ideal for demanding environments and harsh environmental conditions.

Movelco Mobility, S.L.

Turnover¹

Employees²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 .² Up to 20 employees

Company description

Movelco develops, industrialises, manufactures, distributes and sells the widest range of 100% electric vehicles. The company prides itself on its vast experience in the field of sustainable mobility. The company offers its clients professionalism and experience, confident that they can meet all their requirements. Movelco is supported by a strong industrial structure and is owned by the most prestigious electric vehicle manufacturers in the industry and by a group of leading companies in the marketing and after-sales service in the automotive industry. They also provide the most advanced and comprehensive support and after sales service on the market.

Movelco is also an electrical mobility consultancy that provides support services for sustainable logistic requirements. They provide customized solutions adapted to the specific problems of each client.

Products and services

Auxiliary services

Diverse

Movelco has two working divisions:

- In one hand, they offer a wide range of electric vehicles, from motorbikes and off-road vehicles, to 4x4 vehicles, industrial vehicles, passenger cars and multi-passenger vehicles.
- On the other hand, they provide electric mobility consulting services, developing sustainable logistic systems which meet their clients' needs. These solutions are tailor-made and adapted to the required specifications. Movelco is committed to providing solutions that are both efficient and 100% environmentally responsible.

Processes and technologies

Assembly

- Vehicle assembly line.
- Consulting and business development department.
- Logistic systems design and innovation department.

Muutech Monitoring Solutions, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 ² Up to 20 employees

Company description

Muutech was created in 2017 as an IT and industrial monitoring company. It offers innovative services to companies, from sensors to machines and information systems, easily in a single platform. They help each user of the data in the company to easily and visually access information in real time, preventing and detecting problems, facilitating informed decision making.

Products and services

Auxiliary services

- Diverse
- Engineering

Expert in monitoring, it provides the tools and service to help companies obtain and correlate data from different sources (IoT sensors, robots, PLCs, APIs, MES, ERP, databases, industrial protocols, IT infrastructure, communication in network, business data and e-commerce, etc.) breaking down information silos. Through a cloud or on-premise platform (Minerva), data is transformed into information through alarms that combine data from different sources, its historical and real-time, with predictive capacity and that can trigger automated actions, allowing users to make real-time data-driven decisions.

Processes and technologies

Other technologies

It works developing software with a multidisciplinary engineering team, using the latest technologies in development, monitoring and infrastructure.

OP Mobility C-Power, S.A.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1

¹ From € 18,000,000 ² More than 250 employees

Company description

OP Mobility C-Power is a Tier 1 supplier and a world leader in the production of fuel systems and emission control systems. Their mission is to develop and deliver all the functions of the combustion system from the filler cap to the engine. Inery supplies innovative integrated plastic systems which store, transport, deliver and regulate energy and fluids in the vehicle.

The Group has 4 production plants in Spain: 2 are in Galicia – 1 in Arévalo and 1 in Villaverde. In Gondomar they have a centre which focuses on the blown extrusion processes and a metalworking centre which carries out stamping and welding processes.

Products and services

Module or function

Filler pipe

Front End

Tanks

The main activity of OP Mobility is the production of fuel circuits for the automotive industry; they also manufacture stamped metal components and aluminium thermal screens.

Using their experience in the design of fuel systems, the Inery R&D team has developed innovative solutions to complement the current offer on the market. These include CLINFILL (capless) and INBAFFLE (noise reduction), the INSEAL filling system and the INROV advanced valve. These innovations help increase passenger safety and comfort while improving system performance and compliance with the most stringent environmental regulations.

Processes and technologies

Joining processes

Metal shaping

Plastic shaping

In their Galician plants, this company has, among others: Single-layer and multi-layer blown extruding machines, fluoridation processes, welding machines, equipment lines, stamping presses of various tonnages, welding robots for metal components.

The technology behind the fuel system based on the blown process offers the perfect balance between safety, weight and cost for automotive fuel systems. There are many advantages to using plastic materials for the manufacture of fuel systems including: lighter weight, tank durability and compatibility with bio-fuels, design freedom allowing volume economisation, reduced noise, low permeability, impact resistance, sustainability for hybrid power trains and cost effectiveness.

Main customers

Stellantis, Daimler, Renault, General Motors, Nissan, other companies belonging to the Group, etc.

OP Mobility Exterior Business Group, S.A.

Turnover¹

Employees²

Sales information

Main value chain Tier 1

¹ From € 18,000,000 -² More than 250 employees

Company description

OP Mobility is a world leader in the manufacture of automotive exterior components and modules, supporting and accompanying the customers with 86 factories in 19 countries. OP Mobility develops solutions for a more sustainable and connected car.

The Redondela plant was inaugurated in 1991, since then it has produced parts for the Citroën ZX, AX, Xsara Picasso, Berlingo, C4 Picasso, Grand C4 Picasso and Peugeot Partner vehicles.

It currently produces the Citroën bumpers, models: C-Elysée, C4 Spacetourer, Grand C4 Spacetourer and Berlingo, Peugeot Rifter and 301 and Opel Combo, as well as the tailgate of the C4 Spacetourer and Grand C4 Spacetourer.

Products and services

Module or function

Boot

Exterior elements

Front End

Rear end

Injection of thermoplastic material, painted and assembled for the production of bumpers and rear doors.

OP Mobility offers innovative weight-reducing and aerodynamic solutions to reduce fuel consumption and CO2 emissions.

The body parts are integrated into the design of the vehicles, developing an offer with high performance compounds:

- Rear doors with a weight reduction of 30%, compared to steel equipment.
- Bumpers that combine aesthetics, lightness and aerodynamic optimization.

Processes and technologies

Assembly

Joining processes

Plastic shaping

Surface treatments and finishes

The Redondela factory has in its facilities injection machines with a closing force of 1,000 to 3,200 tons, robotized paint line, bite assembly line, JIT parts served directly to the customer, specific die-cutting and welding machines, gluing technology with robotic cells for the production of a plastic tailgate and packaging line for spare parts.

Main customers

Stellantis.

Otebra, S.L.

otebra. s.l.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 3

¹ Less than € 1,500,000 ² Up to 20 employees

Company description

Otebra is a company, founded in 1982, involved in the manufacture of rods for automotive seat frames as well as other parts of the vehicle such as steering wheels, external protectors for headlights, tanks, seat belt buckle guides, bonnet, brakes, boot and doors. Otebra's products are mainly addressed to original equipment suppliers located in Galicia, which represent more than 96% of its turnover. Less than a 4% of its sales come from customers located either in other Spanish regions or abroad.

Products and services

Module or function

Driving position

Front End

Seats

Tanks

- Rods for automotive seat frames
- Rods, from 5 up to 12 mm. of diameter, installed in the steering wheels of the NISSAN F91G project
- Right and left side rods for brake pedals, supplied to Inergy Automotive Systems since 1996
- Rods for van bonnets
- Rods placed on the exterior of the vehicle to protect headlights
- Fastening rods for fuel tanks
- Seat belt buckle guide

Processes and technologies

Metal shaping

Their processes involve the straightening and cutting of wires of different diameters (from 2-12 mm) according to the size required for the development of each piece; these are then shaped using presses or pneumatic/hydraulic machines, taking into account customer specifications. They also manufacture parts using CNC machinery for wires of 4 – 10 mm diameter.

Main customers

Tier 1 suppliers and Viza Automoción.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1
Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 ² Between 21 and 100 employees

Company description

Precisgal Componentes de Automoción S.L. was founded in 1997 in response to a specialization required from clients to meet their needs for mass production machining. From its start until now, Precisgal Componentes has become more and more involved in mechanised production. Using steel as raw material and carrying out turning, milling and grinding processes, Precisgal Componentes supplies parts to various continents from Vigo.

Products and services

Module or function

- Engine
- Safety electronics / vehicle dynamics
- Transmission

Mass produced automotive components, ABS rings and magnetic encoders.

Auxiliary services

- Process outsourcing

- Machining of large, medium and small series using turning, milling and grinding processes in multiple axis.
- Machining of production complements.
- Electrostatic Zn-Al Coating (GEOMET 321), which leads to parts with greater anti-corrosion properties.
- Injection of rubber with metal filler.

Processes and technologies

Metal shaping

- Turning (spindle – sub-spindle)
- Twin turning
- 5-axis milling

Probotec Procesos Industriales, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 ² Up to 20 employees

Company description

Probotec specializes in the various and wide-ranging applications of robotic technology in the automotive industry. They are specialists in the brands ABB, FANUC and KUKA, among others. They are skilled in a range of programming standards such as VAAS (Volkswagen), Stellantis, Renault, MB Rapid (Mercedes Benz), etc. The company provides a comprehensive service for the installation of automated facilities both at national and international level and from small automated cells up to large production lines.

Products and services

Auxiliary services

- Automation and robotics
- Engineering
- Maintenance and services

Probotec programmes any type of technology including spot welding, handling, arc welding, gluing and mastic, laser welding, etc. The company offers engineering, programming, optimisation, consultancy and training, thus providing a comprehensive solution for the installation of automated facilities. Probotec can integrate robotics into any process.

Processes and technologies

- Assembly
- Other technologies

The company offers: "Know-how" on robotics and industrial processes; quality, flexibility and adaptability; collection of all the data required for the project development, the study of materials and the technology to be applied; electrical and mechanical project of the whole integration according to customer specifications; Robcad study of robot accessibility and off-line trajectories; courses and maintenance of the programming project (both automata and robots, and other equipment); cycle time improvements and optimizations; production of B19 programming standards.

Main customers

Stellantis, Renault, Volkswagen, Porsche, Mercedes, Benteler, Gestamp, Nissan, Snop, Rubi, Inabensa, Ecisa, Aritex, Finitec, ABB, etc.

Rely Technologies, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 ² Up to 20 employees

Company description

Rely Technologies is a spin off company, incorporated at the end of 2023, from the company Siali Technologies, which started in 2018.

Products and services

Module or function

Artificial vision

IA

Auxiliary services

Automation and robotics

Engineering

Rely positions itself within the ancillary value chain as a comprehensive artificial intelligence (AI) software solution for visual inspection and quality control. Its focus on several key areas that complement and enhance its customers' value chain:

- 1- Process automation and improvement.
- 2- Data analysis and informed decision making
- 3- Flexibility and adaptability
- 4- Global quality control
- 5- Scalability

Processes and technologies

Other technologies

Rely Technologies is a technology company dedicated to software development. Due to the nature of its activity, it does not need its own plant or production lines. For the development of the software, computer equipment is needed, which does not require a specific location. On the other hand, the product must be implemented in the production lines of the production plants, which implies that sometimes the company's personnel must access the plants of its client companies to carry out the relevant installations.

Main customers

The company's main customers are TIER 1 and TIER 2 from the automotive sector, industrial assemblers and from any industrial sector.

Rodríguez López Auto, S.L.

Turnover ¹

Employees ²

Sales information

Main value chain Tier 1

¹ From € 18,000,000 ² More than 250 employees

Company description

Company dedicated to the transformation of special vehicles (ambulances, transfer vehicles, rapid intervention vehicles, etc.). With an average annual workforce of 250 employees and a production capacity of 1350 units per year, Rodríguez Lopez Auto is positioned as the first company in the transformation of ambulances in the country and among the top five at European level.

Products and services

Module or function

- Door module
- Electrical wiring
- Exterior elements
- Floor coating
- Ground contact system
- Lights, signalling and visibility
- Raw materials
- Roof
- Safety electronics / vehicle dynamics

Mechanical components are incorporated into the vehicle, such as seats, access ramps or steps. In addition, everything that has to do with the electronic development of the car, such as interior and exterior lighting, communications system, etc.

Processes and technologies

- Assembly
- Electrical material
- Metal shaping
- Plastic shaping
- Surface treatments and finishes
- Wood processing

Development of the electromagnetic compatibility of the components included in the vehicles, interior fittings, seat resistance, external projections, regulatory plates, seat belt anchorages and restraint systems, front field of vision, identification of controls, indicator lights and indicators, heating systems, masses and dimensions, air conditioning systems, functional assemblies and components necessary for the second stage manufacture of the vehicles transformed into ambulances.

Serveo Logística, S.A.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 6,000,000 and € 17,999,999. ² More than 250 employees

Company description

The company provides tailor-made logistic services, specializing in providing SCM (supply chain management) solutions, integrated logistics and flow coordination towards automotive assembly lines. Their main assets are the professionalism, commitment and experience of their workforce, enable to develop and run any logistic project their clients may require, offering flexibility and adaptability at all times. It guarantees their customers a high quality service, full traceability in the logistic processes, reliability in deliveries, immediate response and close collaboration.

Products and services

Auxiliary services

- Engineering
- Logistics and transport

The company is specialist in logistic solutions, providing support in one or various stages of their clients' supply chain, such as supply, transport, storage, packaging, distribution and even some activities in their production process. Furthermore, it provides logistic consulting services to their customers with the aim of improving processes.

Thanks to the fact that operations are managed and monitored using their own infrastructures, technologies and information systems, they are able to offer the best solution to their clients.

Processes and technologies

Other technologies

It has its own management system, which allows them to provide their clients with tailor-made solutions and to manage all the means used to ensure the security of processes. The company internally develops all the necessary specific controls to ensure a reliable service and provide their clients with all the necessary information, in the format most adequate to their needs. Other services offered by the company are: components management, development of machinery and means of supply (carts for sequence deliveries, packaging, etc.), assembly processes, modular synchronous, etc.

Main customers

Stellantis, Saint-Gobain, Antolín Group, MCSyncro, Yazaki, Valeo, Pilkington, Delphi, Constellium.

Serveo Servicios a la Producción, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 6,000,000 and € 17,999,999. ² More than 250 employees

Company description

This company, which is part of Serveo Industria, guarantees the overall quality of all components that pass through their premises, thanks to their selection and parts recovery controls, ensuring traceability via automated data capture. Furthermore, they develop and conduct in-house assembly and parts prioritization, creating added value for their customers. These help improve the reliability of the final product quality and provide an important competitive advantage, particularly regarding transport optimization.

Products and services

Auxiliary services

- Die-stamping and tools
- Diverse
- Engineering
- Logistics and transport

This company closely supports its clients in the assembly plants of major manufacturers, with rapid response times to mitigate potential quality problems. It offers pre-assembly, quality control and outfitting services; this allow their clients to guarantee the packaging required for their deliveries and also allows large manufacturers to optimize space on their assembly line. They also develop the machinery and prototypes necessary to carry out these processes.

Processes and technologies

- Assembly
- Joining processes
- Surface treatments and finishes

Serveo provides its customers with resident technicians who monitor potential complaints from the assembly line, establish criteria and provide palliative solutions via quality firewalls, selection and parts replacement. They also have an IT department which develops tailor-made solutions for their clients, guaranteeing the process traceability and security. These developments enable the company to produce real-time reports, allowing clients to understand the situation and to make the pertinent decisions. Other tools used include: e-catalogue, Amadeus system, etc.

Main customers

Stellantis, Saint-Gobain, Grupo Antolín, MCSyncro, Yazaki, Valeo, Pilkington, Delphi, Visteon, Constellium.

SFC Solutions, S.A.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 .² Up to 20 employees

Company description

This company develops flexible automated solutions for industrial production. They offer a tool that gives versatility to the cells, making it possible to reconfigure the same robotic cell from one production run to another in a matter of minutes. The flexibility of the worktables is combined with energy efficiency and simplicity as it is a passive system, without motors (driven by the robot itself) and highly accurate (allowing machining and drilling operations with less than 14 microns of variation). They provide flexibility in the last part of the work triangle of a robotic cell (Robot – Work cradle – tool). They are described as low cost flexibility.

Products and services

Creation of a “flexible cradle” solution that allows a robot to reconfigure its cell to be able to make different part references quickly, efficiently and autonomously.

Stockages Vigo, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 - ² Between 21 and 100 employees

Company description

Stockages Vigo S.L was founded in 1993, the culmination of the professional experience that José Manuel Modroño had been gaining since 1979 in the automotive industry. Dedicated to the provision of logistics and quality management services, Stockages Vigo offers a full range of services in both the customer's and their own facilities, which have a floor area of 11,000 m2 in the Vigo Technology and Logistics Park and Vincios Industrial Estate, ensuring their clients' production and logistics flows.

Products and services

Auxiliary services

- Diverse
- Engineering
- Logistics and transport

– Stockages Vigo designs and manages tailor-made integrated logistics solutions to optimise the supply chain. They offer the following services: customs and non-customs warehousing (DA / DDA) "magasin avancé fournisseur" (MAF), refurbishment, cross-dock, kit preparation , CKDs and PAPs.

– With their wealth of experience and "know-how", Stockages Vigo assists their clients through the various facets of their quality projects: product launch support, resident technicians, crisis management, improvement and development projects, production support, etc. Stockages Vigo establishes action guidelines to follow in the provision of quality control services and parts recovery , so that they are carried out under controlled conditions, in compliance with the the client's requirements and with the optimal level of quality. The service they provide is characterised by the flexibility in the organisation of work teams, the availability of qualified staff and the deployment of rigorous procedures.

Processes and technologies

Other technologies

Continual communication with the client is part of the company's culture; they provide daily information and results using their own IT tools dedicated to the management of the services provided.

Talleres Covi, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 .² Up to 20 employees

Company description

Talleres Covi, S.L. (Cincados Covi) was founded in Vigo in 1973. They started out as an auxiliary company in the automotive industry and have continued the same activity since then; 95% of their work is directed to the auxiliary automotive industry. Their range of services is very limited but they are very specialised and few companies work in the same activity. Their services are designed to improve the properties of primary materials (iron and steel) onto which various coatings or surface treatments are applied. These include electrolytic zinc coating, degreasing, stripping and phosphating of steel.

Products and services

Auxiliary services

Process outsourcing

- Electrolytic zinc coating consists of plating the steel (not stainless) with zinc to improve the primary material's surface properties: wear resistance, increased hardness, corrosion resistance and improved appearance (colour, shine).
- Stripping consists of eliminating rust and metal particles from the surface of the primary material (iron or steel). There are various methods of stripping; in this case chemical stripping with acid dissolved in water, with other additives which may be inhibitors, humectants, surfactants or anti-foaming agents are applied.
- Degreasing can be a preliminary step prior to zinc coating or stripping when parts come pre-greased; it can also be a stand-alone process. It consists of removing oils and grease from the surface of the iron or stainless steel. It is carried out by immersion or by electrolytics.

Processes and technologies

Surface treatments and finishes

They have two industrial units on the A Granxa industrial estate:

- The first is a warehouse where parts are stored prior to treatment or after treatment, awaiting collection; as well as the materials required for performing the processes.
- The other is the factory where the services offered by the company are carried out. They have the following equipment: 4 Rack Zinc Electroplating lines, 2 plating barrels and 1 deburring barrel.

TB Spain Injection, S.L. (TBSI)

Turnover ¹

Employees ²

Sales information

Main value chain Tier 2

¹ Between 1,500,000 and € 5,999,999 - ² Between 21 and 100 employees

Company description

TB Spain Injection, S.L. (TBSI) forms part of the French TBI Group. They are specialists in plastic injection moulding. TBSI has an ISO/TS 16949:2009 certified quality management system.

Products and services

Module or function

- Electrical wiring
- Engine compartment
- Front End
- Seats

TBSI works with the following raw materials: polyamides, polyamides with glass fibres (up to 60%), polyethylene, polypropylene, polycarbonates, ABS, structural and acoustic heat expandable materials and polyoxymethylene (POM). These are moulded to produce:

- Bi-material parts whose main functions are: energy absorbers, sound proofing, insulation.
- Single material parts such as plastic inserts for headrests, armrests (front and rear) and light diffusers.

One of the group's innovative highlights is their experience in electrical connectors for headlights.

Processes and technologies

- Assembly
- Joining processes
- Plastic shaping

- Single material plastic injection moulding line
- Bi-material plastic injection moulding line (with presses from 200 – 550 t) and 6-axis robot. They can perform a range of bi-material injection moulding processes: overmoulding with cooling of the plastic outside the mould; transfer moulding and rotary table Injection of plastic -metal
- Inset overmoulding
- Ultrasound welding process
- Assembly of plastic and metal components
- EDI system

Main customers

Within the automotive industry major clients include: Faurecia, L&L Products, Visteon and Cablerías Auto. Products manufactured by TBSI can be found in vehicles produced by Stellantis, Volkswagen and Renault-Nissan.

Tecnología RFID IOT, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Less than € 1,500,000 .² Up to 20 employees

Company description

Since 1999 this company has been developing RFID software and hardware, starting its operations in Mexico. In 2023 they started a new company in Spain. They are focused on:

- Fixed asset control with RFID
- Tracking and control of returnable packaging with RFID for the automotive industry.

Products and services

With the RPMS (Returnable Packaging Control System), this company makes the production chain efficient to control and count in seconds the pieces supplied in returnable packaging, since each box has an RFID tag relating the pieces it contains. This system is used for loading and unloading in assembly plants and Tier I, II and III suppliers. With this, the system can identify that the suppliers supply the complete material to the plant, avoiding manual counting. With this same solution, applying AI, it can identify that suppliers have returnable packaging supply up to 6 months in advance to avoid problems in the production area. In conclusion, RPMS controls the entire logistics process of the movement of parts in and out of the plant. The Accsys Track Fixed Assets Control System allows to identify all the company's assets from tools, laptops, furniture, etc.

Processes and technologies

Other technologies

Forklift RPMS implements tools to detect if they are circulating through areas that do not belong to them, or if they take or leave packages that do not correspond to what was requested. With this, operators no longer have to be looking at a sheet or a screen, since the system itself informs them if they are performing their activities well and if their productivity is within the required standard. One of the main advantages of this technology is that warehouses or warehouses become dynamic, since now the system indicates the best location according to the type of product they have and do not depend on a location fixed on a map or a standard.

Company description

The TI Fluid Systems Group is a leading global supplier at the design, engineering and manufacture of automotive fluid storage, carrying and delivery systems. Nowadays, the Group is structured into two big divisions: Fluid Carrying Systems (FCS) and Fluid tank and delivery systems. Both divisions work with a special focus in R&D, production, vehicle integration and manufacturing experience with their clients.

The TI Fluid Systems plant in Porriño, with a total surface of 5,000 m2, is part of the FCS Division.

Products and services

Module or function

Engine

Tanks

The innovative technology of TI Fluid Systems, combined with a broad product range, allows the company to meet the most demanding regulations regarding fuel efficiency, functionality, safety and emissions for fluid storage and delivery systems.

The Group is organised into the following areas of activity:

- Brake and fuel lines / chassis bundles.
- Thermal products.
- Powertrain products.
- Fuel tank products
- Pumps and fluid delivery modules.
- Aftermarket products

The TI Fluid Systems plant in Porriño manufactures metallic and plastic fluid carrying lines for brake, fuel and powertrain systems.

Processes and technologies

Assembly

Metal shaping

Plastic shaping

Technology and customer service have made TI Fluid Systems a leader in its field. Its fluid systems are seamlessly integrated into the chassis, cabin and powertrain systems, performing under all conditions and complying with the most demanding safety and functionality regulations. The company has established a network of 5 technical centres and 7 regional centres for research, development and customer support.

Its engineers combine advanced design and manufacture with a global reach to provide their customers with the best products and services.

Main customers

Stellantis, Renault, Nissan, Daimler, VW Group, GM, Ford.

Trans Pereiras, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 - ² Between 21 and 100 employees

Company description

Trans Pereiras, founded in 1954, is dedicated to the activity of logistics and transport, mainly destined for the automotive sector. Its mission is to be an efficient transport company and provide the best service to its customers. As for its long-term vision, it focuses on improving quality, taking into account the impact of new technologies and customer needs. In addition, it prioritizes the union between the facilities of Zaragoza and Tui to offer the client the possibility of having their product less than 300km from any point in the north of the peninsula.

Products and services

Auxiliary services

Logistics and transport

This company has facilities in Tui of 5,500 square meters of storage with eight loading and unloading docks, and in Zaragoza (Figueroelas) of 2,750 square meters. It also has the means and methods (control system picking) necessary to carry out its services.

Processes and technologies

Other technologies

Trans Pereiras has an area enabled for the recovery and selection of pieces under the customer's guides, as well as the placement of an ERP to have virtual locations and security stock management with 24-hour urgent service.

Main customers

Grupo Copo, Jobelsa, Plusfelt, Grupo IPM, Maier Ferroplast, Lear Corporation.

Transportes Aníbal Blanco, S.L.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 - ² Between 21 and 100 employees

Company description

This company is specialist in integrated logistics for the automotive industry. Founded in 1995, this company offers internal and external logistics outsourcing services, integrated into the value chain and adding value in the definition, organisation and optimisation of flow, before and after the industrial process. They utilise systems including cross-docking, milk-run, advanced warehouses, petit train, assembly, packing and picking, groupage (LCL), multi-mode transport, etc. All this is managed by the engineering and organisation department and supported by specialist, powerful software and ITC tools. The company has 15,000 m² of warehousing space and a modern fleet of EURO V and EURO VI wagons with an average age of less than 2 years.

Products and services

Auxiliary services

- Engineering
- Logistics and transport

The main services provided are:

- Milk-run with Europe and Morocco
- Cross docking
- JIT and Kanban deliveries
- Consignment
- Normal and customs warehouses
- Public customs duty
- Containers rental
- Logistic consulting
- Outsourcing projects for internal and external logistics

Processes and technologies

- Assembly
- Other technologies

As well as the above mentioned logistic services, the company has a factory area dedicated to assembly and pre-assembly.

Main customers

Faurecia, Borgwarner, CIE Automotive, Tereos, Shoeller, AMG Metalmecánica and Finsa Group.

Trèves Galicia, S.L.U.

Turnover¹

Employees²

Sales information

Main value chain Tier 1

¹ Between 6,000,000 and € 17,999,999. ² Between 101 and 250 employees

Company description

Trèves, founded in 1836, is a recognized and global leader of automotive interiors and acoustics, providing innovative solutions for the worldwide automotive industry. Trèves deploys their in-depth knowledge of comfort and acoustics in the following four areas: cabin and boot (they are world leaders in this field); seating and components (with solutions for the various technologies imposed on the market: traditional and in-situ); textiles and coverings (applying the entire range of automotive technology available, from thread to seat covers); and motor and chassis (developing innovative solutions for acoustic comfort, thermal treatments and aerodynamics).

Trèves Galicia is a 12.000 m2 production plant and the company currently has 150 employees.

Products and services

Module or function

- Boot
- Engine compartment
- Floor coating
- Seats

- Floor soundproofing: Thermoformed PU foam carpets. Incorporation of structural elements in a range of materials such as expanded polystyrene (PES) or more rigid ones such as polypropylene inserts. Trèves Galicia's differentiating value is their specialist knowledge in the development and manufacture of sound absorbing flooring which also incorporate the complete set of air-conditioning conduits. High-frequency welded sill plates can also be incorporated; these increase product durability as they reinforce high-wear areas.
- Interior soundproofing: made from thermoformed high density (EPDM) sheets of PU foam. Trèves Galicia has recently incorporated in their production plant the manufacture of this family of products utilising felt as the raw material.
- Headrests, armrests, footrests, cushions and backrests using traditional technology (a posteriori incorporation of textile covers) and in-situ (foam filling of pre-formed textile covers).

Processes and technologies

- Joining processes
- Plastic shaping
- Textile shaping

2 circular carrousel for foaming of large dimension pieces (each has 10 positions); 1 oval carrousel for medium-sized pieces (34 available positions);

2 carpet thermoforming lines; 1 felt thermoforming line (new technology); 3 waterjet cutting machines; 2 x 50 t presses for die cutting; 1 carpet roll cutter; 1 high-frequency welder.

Main customers

Stellantis, Grupo Antolín.

Turnover ¹

Employees ²

Sales information

Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 - ² Between 21 and 100 employees

Company description

Unimate Robótica, S.L. is an engineering company specialized in the automation of processes with industrial robots, which was created in November 2013 by two managing partners coming from the ABB Robotics Division. One of the objectives of this company is the contribution in terms of innovation to the Galician industrial fabric with the aim of increasing its competitiveness.

Products and services

Auxiliary services

- Automation and robotics
- Engineering
- Maintenance and services

Engineering, consultancy, automation services and industrial robotics. Turnkey automated facilities, process studies, welding engineering, improvement projects, maintenance and training.

Processes and technologies

- Assembly
- Other technologies

Automation of processes. They have an industrial plant for the integration of automated facilities.

Main customers

Stellantis, Renault, BMW, Antolín Group, Benteler, Borgwarner, Componentes de Vehículos de Galicia, Faurecia, Gestamp, GKN Driveline, Trèves Galicia, Inoxidables Fegosan, TRW, Visteon, Emte Sistemas, Inabensa, Vigotec, Interob, Decuna, Tecdisma, DGH, Bosch, Emenasa, Fundivisa, Hiasa, etc.

Utingal, S.L.

Turnover¹

Employees²

Sales information

Auxiliary value chain

¹ Between 1,500,000 and € 5,999,999 -² Between 21 and 100 employees

Company description

Utingal S.L. was created in 1999 with the idea of responding to the new technology needs in the automotive industry, electronics, food industries, etc. The latest technology applied to all processes allows them to offer excellent quality products, services and prices, as well as meeting the most varied demands of the market. They offer their clients integrated solutions according to their needs: from the design and construction of the tools and / or equipment needed to the production and installation on-site in accordance with the client's specifications; as well as the commissioning and later maintenance. The recognition by their clients is their greatest guarantee.

Products and services

Auxiliary services

Automation and robotics

Die-stamping and tools

Engineering

Machinery and small integrated lines

Maintenance and services

Process outsourcing

– Design and manufacture of tools, capital goods, models automatable lines etc.

– Maintenance and commissioning of capital goods.

– Machining of fibre and composites for the aeronautic industry.

– Machining of production components for the automotive industry.

– 3-dimensional metrology, laser tracking, etc.

Processes and technologies

Assembly

Metal shaping

Other technologies

– Engineering department: CAM design and programming.

– Machining: 3, 4 & 5 axis grinding, CNC turning, CNC grinding, wire and penetration electro-erosion, drilling and threading. They work with steel, aluminium, composites and polymers (nylons and resins).

– Metrology with 3-dimensional equipment, portable equipment and laser tracker.

– Assembly and commissioning, at their site or at the client's.

Main customers

GKN Driveline, Grupo Antolín, Gestamp, Faurecia, Aernnova, Aciturri, Coasa, etc.

Valver, S.L.

Turnover¹

Employees²

Sales information

Main value chain Tier 1

¹ Between 6,000,000 and € 17,999,999. ² Between 101 and 250 employees

Company description

Valver was founded in 1986 as an automotive industry supplier, manufacturing functional labels for safety and decoration. Nowadays, the company's main production is decorative and visible parts for the automotive industry as well as other sectors. They also develop and manufacture functional and security parts including sun-visor labels, sound-proofing labels, steering wheel badges, etc. Over time, and with the experience and knowledge acquired, Valver started to invest in new technologies and to grow, entering new markets which today are key to the success of the company. They include: bicycles, motorbikes, helmets, urban furniture, white goods and injection moulding. Valver currently has production sites in Galicia, Portugal and Colombia.

Products and services

Module or function

- Cockpit
- Door module
- Driving position
- Exterior elements
- Ground contact system
- Lights, signalling and visibility

Valver's products, either decorative or functional, are made to meet the strictest specifications from the constructors.

Interior parts: sound insulation, security labels, functional labels, badges and sills.

Exterior parts: 3D monograms, badges, protective parts and decorative parts.

Processes and technologies

- Plastic shaping
- Surface treatments and finishes

Technologies:

- Screen-printing: printing on all types of materials – polyester, polycarbonate, PVC, PMMA, ABS, waterslide labels (under and on varnish), etc.
- Resin: applying PU resin to screen-printed or plotter printed decals.
- Ecodomes: innovative technology used to make badges or any type of light, flexible 3D parts with chrome effect.
- Kromex: 3Dparts with a similar appearance to chrome.
- Aluminium: application of transparent PU resin on metal badges.
- Plastic injection moulded parts: injection machines from 80 to 250 t.
- IMD: decoration during the injection process.
- IML: printing of PP, ABS, polycarbonate decoration for later placing in the injection mould.
- Luminescence: LED illumination; coloured electroluminescent illumination.

Main customers

Stellantis, Fiat, Volkswagen, Nissan.

Real-time traceability of multiple assets

The Xymview platform provides real-time tracking and tracing of multiple assets in/out door through a network of intelligent devices deployed by the technical team at each customer's premises. Xymview integrates advanced technologies of Radio Frequency Identification (Rain RFID), Near Field Communication (NFC), Bluetooth Low energy (BLE) or Ultra Wideband (UWB) for the traceability of all types of assets (products, packages, pallets, forklifts or personnel among others) in real time.

The service provided covers all customer demands, providing consumables, equipment, infrastructure set-up and software for traceability and efficient supply chain management from any location.

From day one, customers experience:

1. Savings: enables all data associated with any asset to be unified into a single Digital Identifier (RFID) traceable from any location.
2. Efficient management: it allows the traceability of hundreds of products to be analysed at each reading.
3. Reliability: validates the integrity, location and destination of 100% of the assets automatically in real time.

Processes and technologies

Other technologies

Radio Frequency Identification (Rain RFID), Near Field Communication (NFC), Bluetooth Low energy (BLE) or Ultra Wideband (UWB) for the traceability of all types of assets (products, packages, pallets, forklifts or personnel among others) in real time.

ZF – Dalphi Metal España S.L.U.

Turnover¹

Employees²

Sales information

Main value chain Tier 1
Auxiliary value chain

¹ From € 18,000,000 · ² More than 250 employees

Company description

ZF (Dalphimetal España S.A.) designs steering wheels and all kinds of airbags in Vigo and Valladolid. They have an airbags manufacturing plant in Vigo and another one in Porriño which supplies magnesium inserts. Dalphimetal joined the TRW Group in 2005 and more recently the ZF Group, constantly evolving both at productive and technological level. Since its creation in 1929, they have been able to anticipate the requirements from consumers and car manufacturers in terms of comfort, safety and cost.

Thanks to its 137,000 employees in 40 countries around the world (15,000 of them involved in research and development functions), the ZF Group is able to provide the automotive sector with the widest range of active and passive safety technologies.

Products and services

Module or function

Cockpit

Driving position

Roof

Safety electronics / vehicle

dynamics

Seats

– Steering wheels: ZF offers a wide range of steering wheels from basic up to leather versions, which may include heating and decorative elements. The company is constantly striving to improve the steering wheel functions. One recent example is the horn activation when touching part of the airbag cover.

– Airbags: ZF offers a full range of advanced airbag systems, which may be integrated with other safety systems, especially with seat belts, in order to improve the vehicle occupants protection in case of collision. Sensors allow the airbags to adapt according to the seriousness of collision and the occupants size. The ZF airbag systems cover both frontal and side impacts, providing driver, passenger, knee, side and curtain airbags. Current systems are increasingly getting smaller, being able to offer more flexible and economic packaging options.

Auxiliary services

Diverse

After-sale service: replacement airbags and steering wheels.

Processes and technologies
